The Cognitive Approach to Conscious Machines Pentti O. Haikonen, 2015-11-30 Could a machine have an immaterial mind The author argues that true conscious machines can be built but rejects artificial intelligence and classical neural networks in favour of the emulation of the cognitive processes of the brain the flow of inner speech inner imagery and emotions This results in a non numeric meaning processing machine with distributed information representation and system reactions It is argued that this machine would be conscious it would be aware of its own existence and its mental content and perceive this as immaterial Novel views on consciousness and the mind body problem are presented This book is a must for anyone interested in consciousness research and the latest ideas in the forthcoming technology of mind

Volatile Compounds and Smell Chemicals (Odor and Aroma) of Food Eugenio Aprea, 2021-04-29 Among the constituents of food volatile compounds are a particularly intriguing group of molecules because they give rise to odor and aroma Indeed olfaction is one of the main aspects influencing the appreciation or dislike of particular food items Volatile compounds are perceived through the smell sensory organs of the nasal cavity and evoke numerous associations and emotions even before the food is tasted Such a reaction occurs because the information from these receptors is directed to the hippocampus and amygdala and the key regions of the brain involved in learning and memory In addition to identifying the odor active compounds the analysis of the volatile compounds in food is also applicable for detecting the ripening senescence and decay in fruit and vegetables as well as monitoring and controlling the changes during food processing and storage i e preservation fermentation cooking and packaging I warmly invite colleagues to submit their original research or review articles covering all aspects of volatile compounds research in the food sector excluding pesticides and or the analytical methods used to identify measure and monitor these molecules

Learning to Smell Donald A. Wilson, Richard J. Stevenson, 2006-06-06 Written by a neurobiologist and a psychologist this volume presents a new theory of olfactory perception Drawing on research in neuroscience physiology and ethology Donald A Wilson and Richard J Stevenson address the fundamental question of how we navigate through a world of chemical encounters and provide a compelling alternative to the reception centric view of olfaction The major research challenge in olfaction is determining how the brain discriminates one smell from another Here the authors hold that olfaction is generally not a simple physiochemical process but rather a plastic process that is strongly tied to memory They find the traditional approach which involves identifying how particular features of a chemical stimulus are represented in the olfactory system to be at odds with historical data and with a growing body of neurobiological and psychological evidence that places primary emphasis on synthetic processing and experiential factors Wilson and Stevenson propose that experience and cortical plasticity not only are important for traditional associative olfactory memory but also play a critical defining role in odor perception and that current views are insufficient to account for current and past data The book includes a broad comparative overview of the structure and function of olfactory systems an exploration into the mechanisms of odor detection and olfactory perception and a discussion of the implications of the authors theory Learning to Smell will serve as an important reference for workers within the field of chemical senses and those interested in sensory processing and perception

The Neuropsychology of Smell and Taste G. Neil Martin, 2013-06-19 Smell and taste are our most misunderstood senses Given a choice between losing our sense of smell and taste or our senses of sight and hearing most people nominate the former rather than the latter Yet our sense of smell and taste has the power to stir up memories alter our mood and even influence our behaviour In The Neuropsychology of Smell and Taste Neil Martin provides a comprehensive critical analysis of the role of the brain in gustation and olfaction In his accessible and characteristic style he shows why our sense of smell and taste do not simply perform basic and intermittent functions but lie at the very centre of our perception of the world around us Through an exploration of the physiology anatomy and neuropsychology of the senses the neurophysiological causes of smell and taste disorders and their function in physical and mental illness Neil Martin provides an accessible and up to date overview of the processes of gustation and olfaction The Neuropsychology of Smell and Taste provides a state of the art overview of current research in olfactory and gustatory perception With sections describing the effect of odour and taste on our behaviour and evaluating the contribution current neuroimaging technology has made to our understanding of the senses the book will be of interest to researchers and students of neuropsychology and neuroscience and anybody with an interest in olfaction and gustation

Applied Olfactory Cognition Gesualdo M Zucco, Benoist Schaal, Mats Olsson, Ilona Croy, 2014-12-02 Foreword by Richard J Stevenson Macquarie University Australia It was long thought that the human nose might be able to discriminate somewhere in the order of 10 000 different odourants The recent finding that the human nose can discriminate something like a trillion different smells serves as yet another reminder that we have again underestimated the capacity of our sense of smell Bushdid Magnasco Vosshall Keller 2014 This volume serves as a further corrective for anyone who should hold the view that olfaction is unimportant in human affairs The papers presented in this ebook carefully collated and overseen by Aldo Zucco Benoist Schaal Mats Olsson and Ilona Croy showcase a large number of quite different reasons for studying the applied side of olfaction and indeed human olfaction in general The 23 contributions presented here cover a broad range of topics which illustrate contemporary interests in our field Although with a strong applied focus a noteworthy feature of this ebook is the richness of the theoretical perspectives that are developed These range from considerations of olfactory perception memory expertise and priming right the way through to receptor genetics These contributions from many leading experts in the field will surely shape much of the applied work linking olfaction to disease which is a further focus of this ebook In respect to health and disease the chapters on aging pregnancy depression alcohol dependency and environmental odours present overviews and rich new data on many contemporary problems to which the study of olfaction is now contributing A particularly notable aspect of olfactory experience is the affective impact that odours can have on people and their lives The ebook covers some particularly intriguing aspects of work in this area with empirical studies investigating dissociations between wanting and liking stress reduction in the elderly mother infant bonding and the emotions that different odourants can evoke This affective line of work is nicely complemented by empirical studies on expertise the effect of odours on visual attention and the relationship between particular personality traits and interest in olfaction The gradual appropriation of methods from cognitive neuroscience into olfaction is also nicely represented in this ebook with at least three of the chapters reporting data using neuroimaging including a particular intriguing study looking at recognition of odours in mixtures Finally the close links between olfactory perception and sensory evaluation are also reflected in a chapter on wine I hope that

readers of this e book will be struck as I have been in reading its various chapters how much olfaction affects our lives and how the study of this sense can enrich it References Bushdid C Magnasco M Vosshall L Keller A 2014 Humans can discriminate more than 1 trillion olfactory stimuli Science 343 1370 1372
