viable and technically achievable goal To date most attention has been given to the design development and evaluation of
flexible machining systems Now with the essential support of increasing numbers of industrial examples the general concepts
technical requirements and cost effectiveness of responsive computer integrated flexible machining systems are fast
becoming established knowledge There is of course much still to be done in the development of modular computer hardware
and software and the scope for cost effective developments in programming systems workpiece handling and quality control
will ensure that continuing development will occur over the next decade However international attention is now increasingly
turning toward the flexible computer control of the assembly process as the next logical step in progressive factory
automation It is here at this very early stage that Tony Owen has bravely set out to encompass the future field of flexible
