

WS 6.1: Interpreting Solubility Curves

Directions: Use the Solubility Curve Table below to answer all questions. So you do not have to keep flipping your paper over you might want to put the solubility curve on your phone or computer screen when answering the questions on the back. All questions assume the amount of water is 100 ml.

- What is the solvent in this Solubility Curve?
water
- Saturation points are given per how much solvent?
100 ml or 100 g
- What is the saturation point of NaNO_3 at 10°C , 40°C , & 80°C ?
@ 10°C = ~79 g
@ 40°C = ~105 g
@ 80°C = ~146 g
- How much NH_3 can you dissolve in water at 10°C , 30°C , & 90°C ?
@ 10°C = ~70 g
@ 30°C = ~45 g
@ 90°C = ~10 g
- What is the maximum amount of KCl that can be dissolved in water at 20°C , 50°C , & 90°C ?
@ 20°C = ~33 g
@ 50°C = ~42 g
@ 90°C = ~53 g
- If you want to make a saturated solution of NaCl how many grams would you dissolve in 100 grams of water @ 80°C ?
About 40 grams
- Except for KCl What substance is the most soluble in water at 20°C ?
 NaNO_3
- Except for KCl what substance is the most soluble in water at 72°C ?
 KNO_3
- Look up The boiling points for SO_2 , HCl , and NH_3 and write them below:
B.P. SO_2 = -10°C
B.P. HCl = -85°C
B.P. NH_3 = -33°C
- Based on the boiling points you looked up, are SO_2 , HCl , & NH_3 solids, liquids, or gases at 0°C ? (and anywhere else on the solubility curve)
gases

Microemulsions: Structure and Dynamics Stig E. Friberg, Pierre Bothorel, 2018-01-18 This book describes the microemulsion phenomenon in a systematic manner and not only provides an up to date introduction to this topic but also serves as the basis for further development in the area The progress of microemulsion research has taken place in well defined stages The introduction period was founded on Schulman's original discovery and was as expected focused on the interfacial free energy Because Schulman obtained his microemulsions from a macroemulsion by the addition of a cosurfactant The present stage is characterized by an extensively enhanced knowledge about structure and dynamics in these systems This has led to the realization that the structure of the microemulsions is related both to solutions with critical behaviour and long range order structures the lyotropic liquid crystals These two aspects have been elucidated independently by the French groups and by the Lund Spectroscopy group

Colon, 2012-12-06 W A de Jong President of TNO Until some decades ago man supposed that the resilience of the environment was unlimited He thought he could draw heavily on nature with impunity and that he could infinitely dump his waste into the environment We have come to know better now virtually everyone is well aware that one cannot just go on burdening the environment of man animal and plant to such an extent TNO the Netherlands Organization for Applied Scientific Research is among those research institutions that are working on economically feasible solutions for pollution problems resulting from human activities Soil contamination and remediation feature as important topics in TNO's environmental research programme In view of the international scope of the problem TNO organized an international conference on this subject in Utrecht the Netherlands in November 1985 which met with a worldwide response from the scientific community as well as from governments and industry The international interest taken in soil contamination is underlined by the fact that the Second International Conference on Contaminated Soil takes place in a country where remedial action is being given high political priority
