The purpose of this Preliminary Treatment Manual is to offer an overview to the general structure of Solution-Focused Brief Therapy (SFBT). This manual will follow the standardized format and include each of the components recommended by Carnall and Nuro (1997). The following sections are included: (a) overview, description and rationale of SFBT; (b) goals and goal setting in SFBT; (c) how SFBT is contrasted with other treatments; (d) specific active ingredients and therapist behaviors in SFBT; (e) nature of the client-therapist relationship in SFBT; (f) format; (g) session format and content; (g) compatibility with adjunctive therapies; (h) target population; (i) meeting needs of special populations; (j) therapist characteristics and requirements; (j) therapist training; and (k) supervision.

OVERVIEW, DESCRIPTION, AND RATIONALE

Solution-Focused Brief Therapy group treatment is based on over twenty years of theoretical development, clinical practice, and empirical research (e.g., de Shazer et al., 1986; Berg & Miller, 1992; Berg, 1994; De Jong & Berg (2008); de Shazer, Dolan et al., 2006). Solution-Focused Brief Therapy is different in many ways from traditional approaches to treatment. It is a competency-based model, which minimizes emphasis on past failings and problems, and instead focuses on clients' strengths and previous successes. There is a focus on working from the client's understandings of her/his concern/situation and what the client might want different. The basic tenets that inform Solution-Focus Brief Therapy are as follows:

- It is based on solution-building rather than problem-solving.
- The therapeutic focus should be on the client's desired future rather than on past problems or current conflicts.
- Clients are encouraged to increase the frequency of current useful behaviors.
- No problem happens all the time. There are exceptions – that is, times when the problem could have happened but didn't – that can be used by the client and therapist to co-construct solutions.
