Chapter 1 The Systems Development Environment

Chapter Overview

Chapter 1 is an overview of the systems development process, as well as an overview of the textbook. This chapter introduces students to the modern approach to systems analysis and design using various methodologies. Students are introduced to several systems development components, including the process and data-oriented approaches to systems development; different types of information systems; and the systems development life cycle.

This textbook is intended primarily for juniors taking a core course in the information systems major, although the book can be adapted for a similar course at the junior college level or for a two-course sequence on analysis and design. Often students are not familiar with the systems development process, different organizational components, or how these components work together. This chapter provides the general organizational context in which systems development takes place.

The text uses the Systems Development Life Cycle (SDLC) methodology (including its associated problems with the traditional waterfall approach) to introduce students to the structured approach in creating new systems. The student is also introduced to other methodologies such as Computer-Aided Systems Engineering (CASE), the Agile Methodologies, eXtreme Programming, Object Oriented Analysis and Design (OOAD), and the Rational Unified Process (RUP). The text compares and contrast the new with more traditional methods in an effort to show both the advantages and limitations of these methods.

Chapter 1 introduces students to CASE usage in organizations, CASE components, and visual and emerging development tools. CASE tools are used to apply an engineering approach to systems development and can support each phase of the SDLC. The purpose of CASE is to make it easier for an organization to enact a single design philosophy across many projects, systems, and stakeholders. CASE provides support for all SDLC activities.

Instructional Objectives

Specific student learning objectives are included at the beginning of the chapter. From an instructor's point of view, the objectives of this chapter are to:

1. Define and discuss the modern approach to systems analysis and design from an organizational perspective incorporating techniques, tools, and methods.
2. Explain how an organization's objectives, structure, and processes are essential in the
