Powerfuels Nils Bullerdiek, Ulf Neuling, Martin Kaltschmitt, 2024-12-05 Powerfuels are the subject of intense and often contentious current discussions within industry research politics as well as the overall society. These discussions primarily revolve around the practical and technical feasibility of power-to-X processes and applications, their economic viability, the respective environmental benefits, the contribution to climate protection as well as the social acceptability. Thus, the primary aim of this book is to provide a comprehensive overview of various aspects, diverse considerations, and different perspectives regarding the future role and utilization of power-to-X pathways on a global scale. This encompasses the challenge of sourcing necessary feedstocks, feedstock options, their conversion into different products and product groups, exploring the possibilities of using these electricity-based fuels, hydrocarbons in various markets, and establishing suitable framework conditions for viable and sustainable markets in the years to come. These objectives are achieved through a collection of papers contributed by experts actively engaged in various fields related to power-to-X. *Advanced Control of Chemical Processes* 1994 D.

Bonvin, 2014-05-23 This publication brings together the latest research findings in the key area of chemical process control, including dynamic modelling and simulation, modelling and model validation for application in linear and nonlinear model-based control, nonlinear model-based predictive control, and optimization to facilitate constrained real-time optimization of chemical processes, statistical control techniques, major developments in the statistical interpretation of measured data to guide future research, knowledge-based vs. model-based control, the integration of theoretical aspects of control and optimization theory with more recent developments in artificial intelligence and computer science. **Problem Solving in**

Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Michael B. Cutlip, Mordechai Shacham, 2008 Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Second Edition is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages: POLYMATH, Microsoft Excel, and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book. **General Topics and Subject Areas Organized by Chapter:** Introduction to Problem Solving with Mathematical Software Packages, Basic Principles and Calculations, Regression and Correlation of Data, Introduction to Problem Solving with Excel, Introduction to Problem Solving with MATLAB, Advanced Problem Solving Techniques, Thermodynamics, Fluid Mechanics.

Process Modelling and Simulation César de Prada, Constantinos Pantelides, José Luis Pitarch, 2019-09-23 Since process models are nowadays ubiquitous in many applications the challenges and alternatives related to their development validation and efficient use have become more apparent In addition the massive amounts of both offline and online data available today open the door for new applications and solutions However transforming data into useful models and information in the context of the process industry or of bio systems requires specific approaches and considerations such as new modelling methodologies incorporating the complex stochastic hybrid and distributed nature of many processes in particular The same can be said about the tools and software environments used to describe code and solve such models for their further exploitation Going well beyond mere simulation tools these advanced

tools offer a software suite built around the models facilitating tasks such as experiment design parameter estimation model initialization validation analysis size reduction discretization optimization distributed computation co simulation etc This Special Issue collects novel developments in these topics in order to address the challenges brought by the use of models in their different facets and to reflect state of the art developments in methods tools and industrial applications Advanced Control of Chemical Processes ,1991 Advances in Chemical Engineering ,1992-09-08 Advances in Chemical Engineering
