Solutions to Selected Exercises

Alan Agresti

Version August 3, 2012, ©Alan Agresti 2012

This file contains solutions and hints to solutions for some of the exercises in *Categorical Data Analysis*, third edition, by Alan Agresti (John Wiley, & Sons, 2012). The solutions given are partly those that are also available at the website www.stat.ufl.edu/~aa/cda2/cda.html for many of the odd-numbered exercises in the second edition of the book (some of which are now even-numbered). I intend to expand the document with additional solutions, when I have time.

Please report errors in these solutions to the author (Department of Statistics, University of Florida, Gainesville, Florida 32611-8545, e-mail AA@STAT.UFL.EDU), so they can be corrected in future revisions of this site. The author regrets that he cannot provide students with more detailed solutions or with solutions of other exercises not in this file.

Chapter 1

1. a. nominal, b. ordinal, c. interval, d. nominal, e. ordinal, f. nominal.
3. π varies from batch to batch, so the counts come from a mixture of binomials rather than a single $\text{bin}(n, \pi)$. $\text{Var}(Y) = E[\text{Var}(Y \mid \pi)] + \text{Var}[E(Y \mid \pi)] > E[\text{Var}(Y \mid \pi)] = E[n\pi(1 - \pi)]$.
7. a. $\ell(\pi) = \pi^{20}$, so it is not close to quadratic.
 b. $\hat{\pi} = 1.0$. Wald statistic $z = (1.0 - .5) / \sqrt{1.0(0)/20} = \infty$. Wald CI is $1.0 \pm 1.96\sqrt{1.0(0)/20} = 1.0 \pm 0.0$, or $(1.0, 1.0)$. These are not sensible.
 c. $z = (1.0 - .5) / \sqrt{.5(.5)/20} = 4.47$, $P < 0.0001$. Score CI is $(0.839, 1.000)$.
 d. Test statistic $2(20) \log(20/10) = 27.7$, $df = 1$. The CI is $(\exp(-1.96^2/40), 1) = (0.908, 1.0)$.
 e. $P\text{-value} = 2(.5)^{20} = .00000191$.
9. The chi-squared goodness-of-fit test of the null hypothesis that the binomial proportions equal $(0.75, 0.25)$ has expected frequencies $(827.25, 275.75)$, and $X^2 = 3.46$ based on $df = 1$. The P -value is 0.063, giving moderate evidence against the null.
10. The sample mean is 0.61. Fitted probabilities for the truncated distribution are 0.543, 0.332, 0.102, 0.021, 0.003. The estimated expected frequencies are 108.5, 66.4, 20.3, 4.1, and 0.6, and the Pearson $X^2 = 0.7$ with $df = 3$ (0.3 with $df = 2$ if we truncate at 3 and above). The fit seems adequate.
11. With the binomial test the smallest possible P -value, from $y = 0$ or $y = 5$, is

Solutions Manual to accompany Modern Engineering Statistics Thomas P. Ryan, 2007-10-12 An introductory

perspective on statistical applications in the field of engineering Modern Engineering Statistics presents state of the art statistical methodology germane to engineering applications With a nice blend of methodology and applications this book provides and carefully explains the concepts necessary for students to fully grasp and appreciate contemporary statistical techniques in the context of engineering With almost thirty years of teaching experience many of which were spent teaching engineering statistics courses the author has successfully developed a book that displays modern statistical techniques and provides effective tools for student use This book features Examples demonstrating the use of statistical thinking and methodology for practicing engineers A large number of chapter exercises that provide the opportunity for readers to solve engineering related problems often using real data sets Clear illustrations of the relationship between hypothesis tests and confidence intervals Extensive use of Minitab and JMP to illustrate statistical analyses The book is written in an engaging style that interconnects and builds on discussions examples and methods as readers progress from chapter to chapter The assumptions on which the methodology is based are stated and tested in applications Each chapter concludes with a summary highlighting the key points that are needed in order to advance in the text as well as a list of references for further reading Certain chapters that contain more than a few methods also provide end of chapter guidelines on the proper selection and use of those methods Bridging the gap between statistics education and real world applications Modern Engineering Statistics is ideal for either a one or two semester course in engineering statistics

Hadlock, 2020-05-05 This manual is meant to provide supplementary material and solutions to the exercises used in Charles Hadlock s textbook Mathematical Modeling in the Environment The manual is invaluable to users of the textbook as it contains complete solutions and often further discussion of essentially every exercise the author presents in his book This includes both the mathematical computational exercises as well as the research questions and investigations Since the exercises in the textbook are very rich in content rather than simple mechanical problems and cover a wide range most readers will not have the time to work out every one on their own Readers can thus still benefit greatly from perusing solutions to problems they have at least thought about briefly Students using this manual still need to work out solutions to research questions using their own sources and adapting them

to their own geographic locations or to numerical problems using their own computational schemes so this manual will be a useful guide to students in many course contexts Enrichment material is included on the topics of some of the exercises Advice for teachers who lack previous environmental experience but who want to teach this material is also provided and makes it practical for such persons to offer a course based on these volumes This book is the essential companion to Mathematical Modeling in the Environment
