product development Because plastics are unique materials with a broad range of properties they are adaptable to a variety of uses The uniqueness of plastics stems from their physical characteristics which are as different from metals glasses and ceramics as these materials are different from each other One major concern is the design of structures to take loads Metals as well as the other materials are assumed to respond elastically and to recover completely their original shape after the load is removed Based on this simple fact extensive literature on applied mechanics of materials has been developed to enable designers to predict accurately the performance of structures under load Many engineers depend on such texts as Timoshenko's *Strength of Materials* as a guide to the performance of structures Using this as a guide generations of engineers have designed economical and safe structural parts Unfortunately these design principles must be modified when designing with plastics since they do not respond elastically to stress and undergo permanent deformation with sustained loading

Design News, 2008 **Integration of CAD/CAPP/CAM** Jianbin Xue, 2018-07-23 The book introduces the fundamentals and development of Computer aided design Computer aided process planning and Computer aided manufacturing The integration of CAD CAPP CAM product data management and Concurrent engineering and collaborative design etc are also illustrated in detail which make this book be an essential reference for graduate students scientists and practitioner in the research fields of computer sciences and engineering
