Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. What happens when you stir a spoonful of sugar into hot water?

The sugar dissolves into the water.

2. When sugar or another substance is **dissolved** in water, it disappears from view and forms a **homogeneous mixture** with the water, also called a **solution**.

If you can't see the sugar, how can you tell that it is there?

The water tastes sweet and may appear slightly cloudy. [You can boil or evaporate the water to see solid sugar again.]

3. Does sugar dissolve more easily in hot water or cold water? *Hot water*

Gizmo Warm-up

A solution generally consists of two parts, a **solute** that is dissolved and a **solvent** that the solute is dissolved into. For example, sugar is a solute that is dissolved into the solvent water. In the *Solubility and Temperature* Gizmo™, you will study how temperature affects how much solute will dissolve in a solution.

To begin, check that **Potassium nitrate** is selected and the **Temp.** of the water is 20 °C. Click OK.

1. In this solution, what is the solute? *Potassium nitrate*

What is the solvent? *Water*

2. Click **Add 10 g** to mix 10 g of potassium nitrate into the water.

A. Did all of the potassium nitrate dissolve? *Yes*

B. How can you tell?

All of the potassium nitrate disappeared as it was stirred into the water.

Exploration and Meaning Making in the Learning of Science Bernard Zubrowski,2009-08-14 Mountaineers Rock Climbers and Science Educators Around the 1920s rock climbing separated from mountaineering to become a separate sport At that time European climbers developed new equipment and techniques enabling them to ascend mountain faces and to climb rocks which were

considered unassailable up to that time American climbers went further by expanding and improving on the equipment They even developed a system of quantification where points were given for the degree of difficulty of an ascent This system focused primarily on the pitch of the mountain and it even calculated up to decimals to give a high degree of quantification Rock climbing became a technical system Csikszentmihaly 1976 observed that the sole interest of rock climbers at that time was to climb the rock Rock climbers were known to reach the top and not even glance around at the scenery The focus was on reaching the top of the rock In contrast mountaineers saw the whole mountain as a single unit of perception The ascent to them is a gestalt including the aesthetic historical personal and physical sensations Csikszentmihaly 1976 p 486 This is an example of two contrasting approaches to the same kind of landscape and of two different groups of people Interestingly in the US Europe and Japan a large segment of the early rock climbers were young mathematicians and theoretical physicists while the mountaineers were a more varied lot
