Novel Optical Resolution Technologies Kenichi Sakai, Noriaki Hirayama, Rui Tamura, 2007-02-15 After the end of the 20th century the science of crystallization reached a truly exciting stage where new opportunities emerged in both theory and experiment Various physical methods are capable of resolving the surface as well as the inside structure of crystals at the atomic level while new high performance computing resources afford the capability of modeling the complex large scale alignments necessary to simulate crystallization in real systems As a result the science of crystallization has shifted gradually from static to dynamic science and considerable progress now underlies the complex but beautiful crystallization process I believe that if a definitive history of 21st century science is ever written one of the highlights will be the science of crystallization This science has the following characteristics in its advances in sophistication unlimited opportunities not only for intellectual excitement but also for industrial merit strong collaboration with biology and materials science as well as with all areas of chemistry The vast potential of crystallization as an important field of science is far beyond the simple technology of pharmaceutical industries during the 20th century Optical resolution was one small area of chemistry in the last

century This was more a technology than a science largely because trial and error was the only method to obtain good results However the situation is now changing There are so many appealing hidden findings in the process of crystallization Historically crystallization began in an old laboratory in academia and then gradually shifted to industry Now it is making its comeback in academia due to several new research branches trying to discover what is going on during the crystallization process I believe this eld of science is now growing as a result of the wonderful coupling between industry and academia I read a prepublication draft of Novel Optical Resolution Technologies and found that each one of these general characteristics of science had a reality and sharpness that I had not expected While it was a sheer delight to revisit each of these triumphs guided by the wise insights and analyses found throughout the book There is a good balance between the underlying historical material and the design and execution aspects of each topic
