Technical and Technological Solutions Towards a Sustainable Society and Circular Economy Jamal Mabrouki, Azrour Mourade, 2024-05-13 Resource depletion and ecological risks are more than ever at the heart of societal and economic debates In the 1970s the developed countries saw the Fordist growth regime crumble in parallel with the growing awareness of the ecological issue Since the first industrial revolutions technological dynamics have been the cause of many environmental problems and there is a consensus on the diagnosis Integrated technologies reduce resource use and or pollution at source by using cleaner production methods This generally leads to a reduction in the by products energy inputs and resources used by companies to produce goods Integrated production technologies reduce negative environmental impacts at source by substituting or modifying cleaner technologies Examples of integrated or cleaner production technologies are the recirculation of materials the use of environmentally friendly materials such as the substitution of water for organic solvents etc However the implementation of integrated production technologies

is often hampered by obstacles related to cost coordination and skill inertia problems and to the productive organisation of companies In addition to the high investment costs of new integrated technologies additional barriers may emerge depending on the nature of the environmental problem and the type of environmental regulation in question *Artificial Intelligence Solutions for Global Health and Disaster Response: Challenges and Opportunities* Tetyana Chumachenko, Plinio Pelegrini Morita, Dmytro Chumachenko, Saman Ghaffarian, 2024-09-02 Artificial intelligence AI has shown promise as an effective tool in disaster preparedness and response providing a unique perspective on some of the most urgent health challenges Rapid advances in AI technology can potentially revolutionize the way how we respond to emergencies and disasters that affect the world's health including early warning systems resource allocation and real time decision making This Research Topic aims to explore the latest developments in AI and its applications in global health and disaster response providing a comprehensive overview of the potential and challenges of AI in improving health outcomes in crises This Research Topic will bring together leading researchers practitioners and policymakers in global health and disaster response to share their experiences and insights on how AI can be leveraged to improve response efforts and enhance healthcare delivery
