Solution Manager 7.1 SP 5 Troubleshooting guide for System monitoring, E2E Diagnostics, JSM Health check and performance issues

5 5 12,753

While implementing System monitoring for ABAP systems, E2E Diagnostics for Enterprise Portal and JSM health check for ABAP systems, we faced many unexpected issues. Some issues were only in Production environment and not in Quality/Development environment of SolMan. I have tried to document those issues and the solutions we used. Hope this will help the SolMan consultants who are facing these issues in their implementation. We were on SolMan 7.1 SP 5.

1 Functionality: System monitoring

1.1 Issue: Alerts not generated

1) The background job SAP_ALERT_CALCULATION_ENGINE (runs every minute)

This job is the main calculation job for all metrics, events and alerts. If this job is not running properly, no alerts will ever be generated.

If the engine job is not scheduled, you can execute the step in

Basic Configuration -> Step 5 Configure Automatically -> Create Alert Calculation Job.

Screen shots:

5 minutes after executing this step the first metrics should be green.

2) The DPC push web service and EFWK resource manager

Without this service, no metrics can be pushed from the managed system to the solution manager, resulting in grey metrics and no alerts.

SAP Security Configuration and Deployment Joey Hirao,2008-11-18 Throughout the world high profile large organizations aerospace and defense automotive banking chemicals financial service providers healthcare high tech insurance oil and gas pharmaceuticals retail telecommunications and utilities and governments are using SAP software to process their most mission critical highly sensitive data With more than 100 000 installations SAP is the world s largest enterprise software company and the world s third largest independent software supplier overall Despite this widespread use there have been very few books written on SAP implementation and security despite a great deal of interest There are 220 000 members in an on line SAP community seeking information ideas and tools on the IT Toolbox Website alone Managing SAP user authentication and authorizations is

becoming more complex than ever as there are more and more SAP products involved that have very different access issues. It's a complex area that requires focused expertise. This book is designed for these network and systems administrators who deal with the complexity of having to make judgmental decisions regarding enormously complicated and technical data in the SAP landscape as well as pay attention to new compliance rules and security regulations. Most SAP users experience significant challenges when trying to manage and mitigate the risks in existing or new security solutions and usually end up facing repetitive expensive rework and perpetuated compliance challenges. This book is designed to help them properly and efficiently manage these challenges on an ongoing basis. It aims to remove the Black Box mystique that surrounds SAP security. The most comprehensive coverage of the essentials of SAP security currently available: risk and control management, identity and access management, data protection and privacy, corporate governance, legal and regulatory compliance. This book contains information about SAP security that is not available anywhere else to help the reader avoid the gotchas that may leave them vulnerable during times of upgrade or other system changes. Companion Web site provides custom SAP scripts which readers can download to install, configure and troubleshoot SAP.

Cognitively Diagnostic Assessment Paul D. Nichols, Susan F. Chipman, Robert L. Brennan, 2012-12-06 During the past two or three decades research in cognitive science and psychology has yielded an improved understanding of the fundamental psychological nature of knowledge and cognitive skills that psychological testing attempts to measure These theories have reached sufficient maturity making it reasonable to look upon them to provide a sound theoretical foundation for assessment particularly for the content of assessments This fact combined with much discontentedness over current

testing practices has inspired efforts to bring testing and cognitive theory together to create a new theoretical framework for psychological testing a framework developed for diagnosing learners differences rather than for ranking learners based on their differences This volume presents some initial accomplishments in the effort to bring testing and cognitive theory together Contributors originate from both of the relevant research communities cognitive research and psychometric theory Some represent collaborations between representatives of the two communities others are efforts to reach out in the direction of the other community Taking fundamentally different forms psychometric test theory assumes that knowledge can be represented in terms of one or at most a few dimensions whereas modern cognitive theory typically represents knowledge in networks either networks of conceptual relationships or the transition networks of production systems Cognitively diagnostic assessment is a new enterprise and it is evident that many challenging problems remain to be addressed Still it is already possible to develop highly productive interactions between assessment and instruction in both automated tutoring systems and more conventional classrooms The editors hope that the chapters presented here show how the reform of assessment can take a rigorous path
