Schreckenberg,Dietrich E. Wolf,2007-08-15 These proceedings are the fifth in the series Traffic and Granular Flow and we hope they will be as useful a reference as their predecessors Both the realistic modelling of granular media and traffic flow present important challenges at the borderline between physics and engineering and enormous progress has been made since 1995 when this series started Still the research on these topics is thriving so that this book again contains many new results Some highlights addressed at this conference were the influence of long range electric and magnetic forces and ambient fluids on granular media new precise traffic measurements and experiments on the complex decision making of drivers No doubt the hot topics addressed in granular matter research have diverged from those in traffic since the days when the obvious analogies between traffic jams on highways and dissipative clustering in granular flow intrigued both communities alike However now just this diversity became a stimulating feature of the conference Many of us feel that our joint interest in complex systems where many simple agents be it vehicles or particles give rise to surprising and fascinating phenomena is ample justification for bringing these communities together Traffic and Granular Flow has fostered cooperation and friendship across the scientific disciplines
