

iRacing Stock Car Setup Component Guide

version 1.00, February 2010

By Matt Holden

Introduction

In 2008, iRacing hit the scene during a period where sim-racing had become stagnant. Their mission: create the most realistic racing simulation to date. With this mission in mind, the iRacing team created the most complex sim-racing setup garage ever. Older garages had simple settings such as ride height, wedge, springs, etc. Most sim racers are very familiar with this type of garage and are familiar with what each setting does. Opening up the garage in iRacing, most people are overwhelmed with each adjustment. iRacing is the first sim to create a garage system that behaves like a real car should behave, with most (if not all) adjustments changing something else on the car. It is quite overwhelming at first glance, and for those of you who are new to iRacing, it may seem like you'll never understand all this "stuff".

I've written this guide after a year's worth of trial-and-error, research, and a whole bunch of crashed race cars. This is not a guide that will tell you how to set the car up to run competitively, but instead I hope this guide will explain everything. I'll cover just about all the adjustments, and for what I can, I'll add some notes on what the adjustments can do to your car.
