Minai, Yaneer Bar-Yam, 2007-06-24 Recent advances in science and technology have led to a rapid increase in the complexity of most engineered systems In many notable cases this change has been a qualitative one rather than merely one of magnitude A new class of Complex Engineered Systems CES has emerged as a result of technologies such as the Internet GPS wireless networking micro robotics MEMS fiber optics and nanotechnology These complex engineered systems are composed of many heterogeneous subsystems and are characterized by observable complex behaviors that emerge as a result of nonlinear spatio temporal interactions among the subsystems at several levels of organization and abstraction Examples of such systems include the World Wide Web air and ground traffic networks distributed manufacturing environments and globally distributed supply networks as well as new paradigms such as self organizing sensor networks self configuring robots swarms of autonomous aircraft smart materials and structures and self organizing computers Understanding designing building and controlling such complex systems is going to be a central challenge for engineers in the coming decades Experience-Based Human-Computer Interactions: Emerging Research and Opportunities Sosnin, Petr, 2017-10-31 Human computer interaction is constantly evolving in many areas and facets of modern society Analyzing these interactions can provide a more balanced understanding of these technological advances as they pertain to people s lives Experience Based Human Computer Interactions Emerging Research and Opportunities is a pivotal reference source that provides in depth discussions on the

progression and contemporary applications of human computer interaction Highlighting relevant topic areas such as semantic support software intensive systems ontology applications and conceptual objects this publication is ideal for engineers academicians students and researchers that would like to attain more information on recent advances being made to bridge the gap between human and computer interactions

Adapting for Inertia Grant Douglas, 2023-10-31 Despite much learning and research over many decades large ICT software projects have continued to experience poor outcomes or fallen short of original expectations some spectacularly so This is the case in the Australian and New Zealand public sectors even though these projects operate within historically developed institutional frameworks that provide the rules guidelines and controls and aim to consistently improve outcomes Something is amiss In Adapting for Inertia Grant Douglas questions the effectiveness of these institutional frameworks in governing large ICT software projects in the Australian and New Zealand public sectors He also gauges the perspectives of a large number of actors in projects in both sectors and examines two case studies in detail The main narrative to emerge is that the institutional frameworks are in a state of inertia they are failing to adapt owing to various institutional factors all of which have public policy implications Sadly Douglas finds this inertia is likely to continue If there is difficulty in changing the capacity to govern he proposes policymakers should look to change the nature of what is to be governed
