

3.4.3 Bearings can be measured relative to the center of the galaxy. This is analogous to a directional system used on Earth that is based on angular differences to a reference point located at the northern latitudinal axis. In both cases, a bearing of 000 from any point in the galaxy (on the planet's surface) represents a vector directly toward the reference point. The center of the galaxy or the planet's North Pole. Both places which have constant bearing of 000.

3.5 OPERATIONS MANAGEMENT (OPS)

Many shipboard operations involve scheduling resources or hardware (such as power or the use of sensors) that affect a number of departments. In many such cases, it is common for various operations to present conflicting requirements. It is the responsibility of the Operations Manager or Ops to coordinate such activities so that mission goals are not jeopardized. Having a crew member in this decision-making loop is of prime importance because of the wide range of unpredictable situations with which a starship must deal.

The Ops panel presents the Operations Manager with a continually updated list of current major shipboard activities. This list permits Ops to set priorities and allocate resources among current operations. This is especially critical in cases where two or more requests require the use of the same equipment, entail mutually exclusive mission profiles, or involve some unusual safety or tactical considerations.

An example might be a situation where the Stellar Physics department is conducting an experiment using the lateral sensor array to study a nearby binary star. Simultaneously, part of the same array is being time-shared with a long-range cometary population survey. A request from the bridge for a priority scan of a planetary system might jeopardize both studies unless Ops authorizes a mode change in the

array, permitting the Stellar Physics observations to use the upper sensor array. Alternatively, Ops may weigh the option of placing one of the ongoing studies on a lower priority to provide the bridge with immediate use of the lateral array.

PRIORITY AND RESOURCE ALLOCATION

Most routine scheduling and resource allocation is done automatically by the Ops program. This frees the Operations Manager from routine activity, leaving him/her able to concentrate on decisions beyond the scope of the artificial intelligence software. The level of these decision tree programs can be set by the Operations Manager, and also varied with the current fleet status of the ship.

In cases where priorities are ambiguous or where specific Ops approval is required, the panel will display a menu of the most probable options for action. In virtually all cases, the Operations Manager also has the ability to input choices beyond those presented by the action menus. This is important because it is impossible for mission planners to anticipate every possible situation. Action menus may be displayed for any current activity (even those which would normally be handled automatically) upon keyboard request from Ops.

During crisis situations and Fleet-wide Power Mode operations, Ops is responsible for supervision of power allocation in coordination with the Engineering Department (Sec. 15.9). Load shedding of nonessential power usage in such situations

Kretchik,2021-06-01 From the American Revolution to the global war on terror U S Army doctrine has evolved to regulate the chaos of armed conflict by providing an intellectual basis for organizing training equipping and operating the military Walter E Kretchik analyzes the service s keystone doctrine over three centuries to reveal that the army s leadership is more forward thinking and adaptive than has been generally believed The first comprehensive history of Army doctrine Kretchik s book fully explores the principles that have shaped the Army s approach to warfare From Regulations For the Order and Discipline of the Troops of the United States in 1779 to modern day field manuals it reflects the fashioning of doctrine to incorporate the lessons of past wars and minimize the uncertainty and dangers of battle Kretchik traces Army doctrine through four distinct eras 1779 1904 when guidelines were compiled by single authors or a board of officers in tactical drill manuals 1905 1944 when the Root Reforms fixed doctrinal responsibility with the General Staff 1944 1962 the era of multiservice doctrine and beginning in 1962 coalition warfare with its emphasis on interagency cooperation He reveals that doctrine has played a significant role in the Army s performance throughout its history although not always to its

advantage as it has often failed to anticipate accurately the nature of the next war and still continues to be locked in a debate between advocates of conventional warfare and those who emphasize counterinsurgency approaches Each chapter presents individuals who helped define and articulate Army doctrine during each period of its history including George Washington and Baron von Steuben in the eighteenth century Emory Upton and Arthur Wagner in the nineteenth and Elihu Root and William DePuy in the twentieth Each identifies the first principles set down in manuals covering such topics as tactics operations and strategy size organization and distribution of forces and the promise and challenges of technological innovation Each also presents specific cases that analyze how effectively the Army actually applied a particular era s doctrine Doctrine remains the basis of instruction in the Army school system ensuring that all officers and enlisted soldiers share a common intellectual framework This book elucidates that framework for the first time The Vietnam War James H. Willbanks,2017-11-22 The Vietnam War remains one of the most contentious events in American history This book is a collection of essays that seeks to examine the current state of scholarship on the war and its aftermath It is divided into five sections which address American presidents and the war the conduct of the war in the field the impact of the Tet Offensive the meaning of the war and its lasting legacies The purpose of the collection is to present the most recent contributions to the continuing academic and scholarly dialogue about one of the most momentous historical events of the twentieth century
