PARTICLE THEORY AND STATES OF MATTER

What is the theory of particles? Understanding the nature of matter and the arrangement of particles is the basis of the particle theory. The particle theory is based on the following points:

- 1. **Particle Theory** is the theory that all matter is made up of tiny particles. These particles have dimensions of particle theory.
- 2. **Particle Theory** is the theory that all matter is made up of tiny particles. These particles have dimensions of particle theory.
- 3. **Particle Theory** is the theory that all matter is made up of tiny particles. These particles have dimensions of particle theory.

States of Matter Matter can exist in three primary states: solid, liquid, and gas. Each state has different properties. The particles in each state are arranged differently. In solids, particles are packed closely together. In liquids, they are more spread out. In gases, they are very far apart.

Changes of State Matter can change from one state to another. These changes are called changes of state. They are caused by heating or cooling.

Diffusion Diffusion is the process by which particles move from an area of high concentration to an area of low concentration. It occurs in all states of matter.

Evaporation Evaporation is the process by which liquid particles change into gas particles. It occurs at the surface of a liquid.

Condensation Condensation is the process by which gas particles change into liquid particles. It occurs when gas particles cool down.

Boiling Boiling is the process by which liquid particles change into gas particles. It occurs throughout a liquid.

Freezing Freezing is the process by which liquid particles change into solid particles. It occurs when a liquid cools down.

Melting Melting is the process by which solid particles change into liquid particles. It occurs when a solid is heated.
