Proceedings of International Conference on Communication, Circuits, and Systems Sukanta Kumar Sabut, Arun Kumar Ray, Bibudhendu Pati, U Rajendra Acharya, 2021-04-02 The book proposes new technologies and discusses innovative solutions to various problems in the field of communication circuits and systems as reflected in high quality papers presented at International Conference on Communication Circuits and Systems IC3S 2020 held at KIIT Bhubaneswar India from 16-18 October 2020. It brings together new works from academicians, scientists, industry professionals, scholars, and students together to exchange research outcomes and open up new horizons in the areas of signal processing, communications, and devices.

Essential Knowledge for Transistor-Level LSI Circuit Design Toru Nakura, 2016-05-09 This book is a collection of the miscellaneous knowledge essential for transistor-level LSI circuit design, summarized as the issues that need to be considered in each design step. To design an LSI that actually functions and to be able to properly measure it, an extremely large amount of diverse, detailed knowledge is necessary. Even though one may read a textbook about an op-amp, for example, the op-amp circuit design may not actually be possible to complete in one's CAD tools. The first half of this text explains important design issues such as the operating principles of CAD tools, including schematic entry, SPICE simulation, layout, and verification, and RC extraction. Then, mistake-prone topics for many circuit design beginners, resulting from their lack of consideration of these subjects, are explained, including IO buffers, noise, and problems due to the progress of miniaturization. Following these topics, basic but very specialized issues for LSI circuit measurement are explained, including measurement devices and measurement techniques. Readers will have the simulated experience of the whole flow from top to bottom of circuit design and measurement. The book will be useful for newcomers to a lab or to new graduates who are assigned to a circuit design group but have little experience in circuit design. This published work is also ideal for those who have some experience in circuit design to confirm and complement the knowledge that they already possess.

It focuses on OpenLane and Caravel EDA tools due to their current major role in the open-source IC design ecosystem. OpenLane provides a robust and flexible platform that automates the entire digital design flow from Register Transfer Level (RTL) to Graphic Data System II (GDSII), making it an ideal tool for teaching and learning the physical design process. Caravel, on the other hand, serves as an open-source System on a Chip (SoC) platform, allowing designers to integrate and test their designs in a versatile real-world environment. It complements OpenLane by enabling users to package and validate their designs, bridging the gap between

theoretical knowledge and practical implementation Together these tools provide a way to understand the full tape out process in a way that is accessible to students researchers and professionals alike Premarket Approval (PMA) Manual Center for Devices and Radiological Health (U.S.).
