Control of Machines S. K. Bhattacharya, Brijinder Singh, 2006 Control of Machines is one of the most important functional areas for electrical and mechanical engineers working in industry In this era of automation and control every engineer has to acquaint himself on the design installation and maintenance of control systems This subject must find its place as a compulsory applied engineering subject in degree and diploma curriculum Some progressive states and autonomous institutions have already introduced this subject in their curriculum In this book static control and programmable controllers have been included keeping in view the latest developments in modern industry Relay and static control have been dealt with in details Most of the control circuits included in this book have been taken from Indian industry A chapter has been devoted to protection of motors and troubleshooting in control circuits The chapter on PLC has been made very elaborate to deal with all aspects of logic controllers Review questions have been included at the end of each chapter The explanations of circuits and design procedure of control circuits have been made very simple to help students understand easily Students teachers and shop floor and design office engineers will find this book a very useful companion

**PROGRAMMABLE LOGIC CONTROLLER** PEng. Emmanuel Pregrino Mgisha, 2024-05-05 The programmable logic controller represents a key factor in industrial automation because before programmable logic controllers manufacturing plants employed relay based circuitry to energise different loads based on how the relays were wired together The circuit patterns used for these drawings are known as ladder diagrams Relays were costly required constant maintenance and could not be easily reconfigured As PLCs took over this process it was essential to maintain a similarity to the old system thus ladder logic was created as the first PLC programming language Ladder logic is one of the top 5 most popular types of PLC programming languages used in various module syllabuses in various fields of Engineering courses including Electrical Electronics Telecommunications Mechanical Mechatronics Electromechanical Oil and Gas Ship Building and Marine Engineering Pneumatic and Hydraulic Systems to design various projects and systems in various areas including domestic residence industrial systems control of machinery commercial mining sector aircraft electric vehicles marine automation power stations power substations electric train and railway electrification systems etc
