Phonological Templates in Development Marilyn May Vihman, 2019-10-30 This book explores the role of phonological templates in early language use from the perspective of usage based phonology and exemplar models and within the larger developmental framework of Dynamic Systems Theory After analysing children's first words and their adult targets Vihman sets out procedures for establishing the children's later prosodic structures and templates drawing on data from American and British English Estonian Finnish French Italian and Welsh she also provides briefer longitudinal accounts of template use in Arabic and Brazilian Portuguese The children are found to begin with simple word forms that match their selected adult targets this is followed by the production of more challenging words adapted to fit the child's existing patterns Early accuracy is replaced by later recourse to an inner model a template of a favoured word shape The book also examines the timing fading quantification and function of child phonological templates In addition two chapters focus on the use of templates in adult language in the core grammar and in the more creative morphology of colloquial short forms and hypocoristics in French and Estonian and of English rhyming compounds The idea of templates is traced back to its origins in Prosodic Morphology but its uses are most in evidence in the informal settings of adult language at play Throughout the volume the discussion returns to the issues of emergent systematicity the roles of articulatory and memory challenges for children and the similarities and differences in the function of templates for adults as compared with children

Kušec,Ivona Djurkin Kušec,2024-07-10 The appearance of the domestic pig today is shaped mainly by the economic expectations of us humans Today's pig has superior reproductive fattening and carcass traits compared to its ancient ancestors This could not be achieved without the highly effective support of scientific research aimed at revealing the genetic basis underlying the important economic traits of pigs and the involvement of novel technologies in phenotyping these animals both in vivo and post mortem Yet the research is spreading beyond the biological issues connected to the production of pigs and their products The latest developments in computer science and informatics technology enable us to collect and store information from all stages in the production of food leading back to its origin Questions about the breed the way the pigs were raised how were they managed and how they were processed into a wide palette of products can be answered by the use of methodologies developed by data scientists and those from the fields of different omics All this information can be passed along the chain to consumers in a repeatable manner The producers can use these data to manage such complex issues as meat or product quality And this closes the circle Tracing the domestic pig is an attempt to present the current knowledge about this valuable animal its origin composition and the food that it gives us and to predict or foresee what can happen to this species in the time to come **Methods in Macromolecular Crystallography** North Atlantic Treaty

Neuroimaging biomarkers in Alzheimer's disease Samuel Barrack,2013-10-20 In view of the growing prevalence of AD worldwide there is an urgent need for the development of better diagnostic tools and more effective therapeutic interventions Indeed much work in this field has been done during last decades As such a major goal of current clinical research in AD is to improve early detection of disease and presymptomatic detection of neuronal dysfunction concurrently with the development of better tools to assess disease progression in this group of disorders All these putative correlates are commonly referred to as AD related biomarkers The ideal biomarker should be easy to quantify and measure reproducible not subject to wide variation in the general population and unaffected by co morbid factors For evaluation of therapies a biomarker needs to change linearly with disease progression and closely correlate with established clinico pathological parameters of the disease There is growing evidence that the use of biomarkers will increase our ability to better indentify the underlying biology of AD especially in its early stages These biomarkers will improve the detection of the patients suitable for research studies and drug trials and they will contribute to a better management of the disease in the clinical practice Indeed much work in this field has been done during last decades The vast number of important applications combined with the untamed diversity of already identified biomarkers show that there is a pressing need to structure the research made on AD biomarkers into a solid comprehensive and easy to use tool to de deployed in clinical

settings To date there are few publications compiling results on this topic That is why when I was asked to address this task I accepted immediately I am happy to present you a bundle of the best articles published about biomarkers for Alzheimer s disease in recent times
