FLYING TIPS

- Directional hovering, hovering and landing before attempting to learn other moves.
- Flying 2 to 3 feet above the ground will reduce ground turbulence and make flying easier.
- When first attempting to fly in different directions, start by keeping the direction stick until you have a feel for it. When you are comfortable slowly until you become comfortable operating the drone.
- Once you've mastered flying in directions, practice rotational controls. Swinging and keeping drone facing the same direction as you rotate flying easier and more intuitive.
- Stay 2 to 3 feet away from walls and ceilings as drone will be drawn towards them if you fly too close.
- Whenever blades come in contact with anything other than air, throttle down or auto land immediately, no amount possible or further damage.
- If anything prevents drone's blades from spinning for 10s, remove battery or disconnect it or auto land immediately. Do not attempt to fly until the situation has been resolved and damage fixed.
- Should something prevent drone's blades from spinning, drone may auto shutdown. If battery recovery will need to be unplugged then reconnected to restore flying power.
- When drone has too far away, lost and the control range of the remote, the drone will auto land to prevent it from flying away unattended.
