Modern Business Process Automation Arthur H. M. ter Hofstede, Wil M. P. van der Aalst, Michael Adams, Nick Russell, 2009-11-18 The field of Business Process Management BPM is marred by a seemingly endless sequence of proposed industry standards Contrary to other fields e.g. civil or electronic engineering these standards are not the result of a widely supported consolidation of well understood and well established concepts and practices In the BPM domain it is frequently the case that BPM vendors opportunistically become involved in the creation of proposed standards to exert or maintain their influence and interests in the field Despite the initial fervor associated with such standardization activities it is no less frequent that vendors either choose to drop their support for standards that they earlier championed on an opportunistic basis or elect only to partially support them in their commercial offerings Moreover the results of the standardization processes themselves are a concern BPM standards tend to deal with complex concepts yet they are never properly defined and all too often not informed by established research The result is a plethora of languages and tools with no consensus on concepts and their implementation They also fail to provide clear direction in the way in which BPM standards should evolve One can also observe a dichotomy between the business side of BPM and its technical side While it is clear that the application of BPM will fail if not placed in a proper business context it is equally clear that its application will go nowhere if it remains merely a motivational exercise with schemas of business processes hanging on the wall gathering dust
