S. Department Of Commerce,National Oceanic and . . . Administration,National Weather Service,2013-07-02 The National Weather Service NWS has a number of devices for detecting severe thunderstorms Included in these are radar satellite and lightning detection networks However the most important tool for observing thunderstorms is the trained eye of the storm spotter While radar is used quite often in severe storm warnings conventional weather radar will only indicate areas and intensities of precipitation It does not give any indication of cloud formations or wind fields associated with a storm Doppler radar which is being introduced across the country will give some indication of air motions inside a storm Doppler radar though will not give these indications down to ground level It is impossible for any radar to detect every severe weather event in its coverage area and radar occasionally suggests severe weather when in fact none is present **Advanced Spotters' Field Guide** ,2009* *Ultimate Explorer Field Guide: Mammals* National Geographic Kids,Patricia Daniels,2019 Reference guide to mammals for children
