Inducible Transcription Factors in Mapping of the Central Nervous System Function and Dysfunction L.

Kaczmarek,H.A. Robertson,2002-07-01 That molecular neurobiology has become a dominant part of neuroscience research can be credited to the discovery of inducible gene expression in the brain and spinal cord This volume deals with genes

whose expression patterns in the vertebrate central nervous system were the first to be revealed and then the most extensively investigated over the last 15 years Immediate early genes IEG and their protein products especially those acting

as regulators of transcription inducible transcription factors ITF have proven to be very valuable tools in functional

neuroanatomy and neurophysiology as they are rapidly and transiently induced in specific neurons in response to various

modes of stimulation Thus they have been used to map neuronal populations selectively responsive to a variety of conditions

such as sensory and learning experience electrical stimulation of specific circuits seizures and neurodegeneration This single

volume written by the most prominent authors in the field brings together for the first time information about the most

widely studied IEG ITF in a whole variety of phenomena of neuronal activation It starts with a critical appraisal of the

technologies employed for the studies on gene protein and transcription factor activity in the nervous system Several

chapters present exhaustive examples of expression patterns of the ITF in vocal avian brain mammalian brain sensory

regions areas involved in regulation of circadian rhythms and the spinal cord The next parts cover functional and regular

aspects of individual IEG ITF expression c fos in learning and memory c jun and others in neuropathology and neuronal

stress responses Elk 1 egr family and CREB in neuronal plasticity and learning This volume will be useful as a major

reference on this topic Furthermore it attempts to unravel the seemingly overwhelming complexity of the phenomena of gene

Senna de Oliveira,Richard Willian Bell,2022-08-03 This book will address the major subsoil physical and chemical constraints and their implications to crop production Plant growth is often restricted by adverse physical and chemical properties of subsoils yet these limitations are not revealed by testing surface soils and hence their significance in crop management is often overlooked The major constraints can be physical or chemical Physical limitations such as poor nil subsoil structure sandy subsoils that do not provide adequate water or gravelly subsoils and etc On the other hand chemical constraints include acidity alkalinity high extractable Al or Mn low nutrient availability salts boron toxicity and pyritic subsoils Some of these constraints are inherent properties of the soil profile while others are induced by crop and soil management practices This aim of this book is to define the constraints and discuss amelioration practices and benefits for crop production This book will be of interest to readers involved with agriculture and soil sciences in laboratory applied or classroom settings
