need for securing virtualization but security professionals do not yet have a book outlining the many security applications of virtualization that will become increasingly important in their job requirements This book is the first to fill that need covering tactics such as isolating a virtual environment on the desktop for application testing creating virtualized storage solutions for immediate disaster recovery and high availability across a network migrating physical systems to virtual systems for analysis and creating complete virtual systems to entice hackers and expose potential threats to actual production systems About the TechnologiesA sandbox is an isolated environment created to run and test applications that might be a security risk Recovering a compromised system is as easy as restarting the virtual machine to revert to the point before failure Employing virtualization on actual production systems rather than just test environments yields similar benefits for disaster recovery and high availability While traditional disaster recovery methods require time consuming reinstallation of the operating system and applications before restoring data backing up to a virtual machine makes the recovery process much easier faster and efficient The virtual machine can be restored to same physical machine or an entirely different machine if the original machine has experienced irreparable hardware failure Decreased downtime translates into higher availability of the system and increased productivity in the enterprise Virtualization has been used for years in the field of forensic analysis but new tools techniques and automation capabilities are making it an increasingly important tool By means of virtualization an investigator can create an exact working copy of a physical computer on another machine including hidden or encrypted partitions without altering any data allowing complete access for analysis The investigator can also take a live snapshot to review or freeze the target computer at any point in time before an attacker has a chance to cover his tracks or inflict further damage
