Sensors for Gait, Posture, and Health Monitoring Volume 1 Thurmon Lockhart,2020-06-17 In recent years many technologies for gait and posture assessments have emerged Wearable sensors active and passive in house monitors and many combinations thereof all promise to provide accurate measures of physical activity gait and posture parameters Motivated by market projections for wearable technologies and driven by recent technological innovations in wearable sensors MEMs electronic textiles wireless communications etc wearable health performance research is growing rapidly and has the potential to transform future healthcare from disease treatment to disease prevention The objective of this Special Issue is to address and disseminate the latest gait posture and activity monitoring systems as well as various mathematical models methods that characterize mobility functions This Special Issue focuses on wearable monitoring systems and physical sensors and its mathematical models can be utilized in varied environments under varied conditions to monitor health and performance

Objective Biometric Methods for the Diagnosis and Treatment of Nervous System Disorders Elizabeth B. Torres,2018-06-29 Objective Biometric Methods for the Diagnosis and Treatment of Nervous System Disorders provides a new and unifying methodological framework introducing new objective biometrics to characterize patterns of sensory motor control underlying symptoms Its goal is to radically transform the ways in which disorders of the nervous system are currently diagnosed tracked researched and treated This book introduces new ways to bring the laboratory to the clinical setting to schools and to settings of occupational and physical therapy Ready to use graphic user interfaces are introduced to provide outcome measures from wearable sensors that automatically assess in near real time the effectiveness of interventions Lastly

examples of how the new framework has been effectively utilized in the context of clinical trials are provided Provides methods and their implementation using real data and simple computer programs that students and researchers from less technically trained fields can use Describes the motivation for methods according to the problem domain in light of existing methods for each chapter along with their lack of neuroscientific foundation and invalid statistical assumptions Accompanied by a companion website which contains Appendices with MATLAB codes and data samples to generate the graphics displayed in all chapter figures Features videos illustrating the experimental set up for scenarios and methods described in each chapter Includes step by step explanations of paradigms in each clinical or typical sample population to enable reproducibility of the study across different clinical phenotypes and levels of expertise in sports the performing arts or mere individual academic predispositions preferences
