

Half-Life Lab

Before this begins, find your other group and pass this document back to your prewriting partners of your choice or print this page.

Purpose

The purpose of this hands-on lab is to model the concept of half-life using a simple, inexpensive radioactive source.

Materials

- 100 M&M's candies, pretzels, or other small candies with two different colors
- container or other small bag/pot to hold

Procedure

1. Place 100 candies in the shoe box, covered side up. The candies will stand for units of a hypothetical radioactive element.
2. Cover the box and shake it vigorously for three seconds. This is one time interval.
3. Remove the lid and take out any candies painted that face that are showing brown-side down. These candies represent the source that decayed during the time interval. Count and record the number until the number of brown-side down and the number of remaining red-brown-side down.
4. Continue repeating steps two and three until all candies have decayed or you have reached 10 seconds in the shoe box.
5. Repeat the entire experiment (steps 1-4) at least 5 times and record all data.

Data and Observations
