Foods Sagar M. Goyal, Jennifer L. Cannon, 2016-08-25 Foodborne viruses are an important group of pathogens recognized to cause significant disease globally in terms of both number of illnesses and severity of disease Contamination of foods by

enteric viruses such as human norovirus and hepatitis A and E viruses is a major concern to public health and food safety. Food Virology is a burgeoning field of emphasis for scientific research. Many developments in foodborne virus detection, prevention and control have been made in recent years and are the basis of this publication. This second edition of *Viruses in Foods* provides an up to date description of foodborne viruses of public health importance including their epidemiology and methods for detection, prevention and control. It uniquely includes case reports of past outbreaks with implications for better control of future outbreaks, a section that can be considered a handbook for foodborne virus detection and updated and expanded information on virus prevention and control with chapters on natural virucidal compounds in foods and risk assessment of foodborne viruses.

Environmental and Food Virology Gislaine Fongaro, David Rodriguez LAZARO, Doris Sobral Marques Souza, 2023-06-23

Enteric pathogenic viruses are a major challenge in public health as they represent a major concern with a severe global impact to the economy, commerce and health systems. Consequently, their active monitoring can allow preventive surveillance and the discovery of new viruses exemplifying an important epidemiological and health control tool. In an unprecedented way, this book addresses the general characteristics of enteric viruses and their environmental transmission with a particular emphasis on their structures, stability, routes of transmission and the use of bioindicators for epidemiological monitoring and control. In addition, this book will also address the recent developments for viral concentration and detection in environmental and food samples and the challenges for the control of environmental and food viruses to reduce microbiological risk for final consumers.

Microbiological risk assessment of viruses in foods - Part 1: food attribution, analytical methods and indicators. Meeting report World Health Organization, Food and Agriculture Organization of the United Nations, 2024-11-28

In response to a request from the 53rd Session of the Codex Committee on Food Hygiene (CCFH), the Joint FAO/WHO Expert Meeting on Microbiological Risk Assessment (JEMRA) convened a meeting to review recent scientific developments, data and evidence associated with foodborne viruses. The Expert Committee 1 reviewed the literature and available surveillance databases and participated in an expert knowledge elicitation which ranked foodborne viruses according to frequency and severity. 2 ranked the relevant food commodities of highest public health concern. 3 discussed methods for virus testing performed for outbreak investigation and product testing as part of surveillance and monitoring strategies and 4 reviewed current and potential indicators for viral contamination.

Viruses in Food Food and Agriculture Organization of the United Nations, World Health Organization, 2008

This report draws attention to the threat of viruses as a risk to public health when they are present in food. Viruses require special attention because they behave differently from bacteria and because currently used control measures typically either have not been validated and there is not a good understanding of their efficacy towards viruses or are not effective in controlling virus contamination. Data from recent studies have shown that foodborne viral infections are very common in many parts of the world despite the measures already in place to reduce bacterial contamination.
