This new edition of the book explains in detail the two phases of wealth creation through investment in securities. The first phase, Security Analysis, deals with the selection of securities for investment. The book begins with an introduction to the investment process and a familiarization of the securities market environment and the trading system in India, followed by different dimensions of the risk involved in investment. The different methods of security analysis, such as Fundamental analysis (including economy, industry and company analysis), Technical Analysis and Random Walk Theory (including Efficient Market Hypothesis), are explained in different chapters. The valuation of securities, such as equity shares and bonds, is illustrated with examples. The second phase, Portfolio Management, includes different processes such as portfolio analysis, portfolio selection, portfolio revision and portfolio evaluation. These processes are explained in different chapters. Pricing theories, such as Capital Asset Pricing Model (CAPM), Arbitrage Pricing Theory (APT) and Fama French Three Factor Model, are explained with suitable examples.
