Explaining Law Larry D. Barnett, 2015-08-04

Sociologist lawyer Larry D Barnett advances the macrosociological thesis that in nations that are structurally complex and democratically governed concepts and doctrines of law on society central social activities are fashioned by society level conditions not by particular or even prominent individuals Because a substantial body of social science research has found that law in a modern nation does not have a large permanent effect on the frequency of such activities the book contends that the content of law on the activities is a product not a determinant of the society in which the law exists Explaining Law bolsters this contention with several original studies and illustrates types of quantitative evidence that can be used to build a macrosociological theory of law

Statistics and Probability in Forensic

Anthropology Zuzana Obertová, Alistair Stewart, Cristina Cattaneo, 2020-07-28

Statistics and Probability in Forensic Anthropology provides a practical guide for forensic scientists primarily anthropologists and pathologists on how to design studies how to choose and apply statistical approaches and how to interpret statistical outcomes in the forensic practice As with other forensic medical and biological disciplines statistics have become increasingly important in forensic anthropology and legal medicine but there is not a single book which specifically addresses the needs of forensic anthropologists in relation to the research undertaken in the field and the interpretation of research outcomes and case findings within the setting of legal proceedings The book includes the application of both frequentist and Bayesian statistics in relation to topics relevant for the research and the interpretation of findings in forensic anthropology as well as general chapters on study design and statistical approaches addressing measurement errors and reliability Scientific terminology understandable to students and advanced practitioners of forensic anthropology pathology and related disciplines is used throughout Additionally Statistics and Probability in Forensic Anthropology facilitates sufficient understanding of the statistical procedures and data interpretation based on statistical outcomes and models which helps the reader confidently present their work within the forensic context either in the form of case reports for legal purposes or as research publications for the scientific community Contains the application of both frequentist and Bayesian statistics in relation to topics relevant for forensic anthropology research and the interpretation of findings Provides examples of study designs and their statistical solutions partly following the layout of scientific manuscripts on common topics in the field Includes scientific terminology understandable to students and advanced practitioners of forensic anthropology legal medicine and related disciplines

Societal Agents in Law Larry D. Barnett, 2019-01-16 In this two volume set Larry D Barnett delves into the macrosociological sources of law concerned with society important social activities in a structurally complex democratically governed nation Barnett explores why when and where particular proscriptions and prescriptions of law on key social activities arise persist and change The first volume Societal Agents in Law A Macrosociological Approach puts relevant

doctrines of law into a macrosociological framework uses the findings of quantitative research to formulate theorems that identify the impact of several society level agents on doctrines of law and takes the reader through a number of case analyses The second volume Societal Agents in Law Quantitative Research reports original multivariate statistical studies of sociological determinants of law on specific types of key social activities Taken together the two volumes offer an alternative to the almost total monopoly of theory and descriptive scholarship in the macrosociology of law comparative law and history of law and underscore the value of a mixed empirical theoretical approach

Sampling of Populations Paul S. Levy, Stanley Lemeshow, 2013-06-07 A trusted classic on the key methods in population sampling now in a modernized and expanded new edition Sampling of Populations

Fourth Edition continues to serve as an all inclusive resource on the basic and most current practices in population sampling. Maintaining the clear and accessible style of the previous edition, this book outlines the essential statistical methods for survey design and analysis while also exploring techniques that have developed over the past decade. The Fourth Edition successfully guides the reader through the basic concepts and procedures that accompany real world sample surveys such as sampling designs, problems of missing data, statistical analysis of multistage sampling data and nonresponse and poststratification adjustment procedures. Rather than employ a heavily mathematical approach, the authors present illustrative examples that demonstrate the rationale behind common steps in the sampling process, from creating effective surveys to analyzing collected data. Along with established methods, modern topics are treated through the book's new features which include: A new chapter on telephone sampling with coverage of declining response rates, the creation of do not call lists and the growing use of cellular phones; A new chapter on sample weighting that focuses on adjustments to weight for nonresponse, frame deficiencies and the effects of estimator instability; An updated discussion of sample survey data analysis that includes analytic procedures for estimation and hypothesis testing; A new section on Chomsky's widely used method of taking probability proportional to size samples with minimum replacement of primary sampling units; An expanded index with references on the latest research in the field. All of the book's examples and exercises can be easily worked out using various software packages including SAS, STATA and SUDAAN, and an extensive FTP site contains additional data sets. With its comprehensive presentation and wealth of relevant examples, *Sampling of Populations* Fourth Edition is an ideal book for courses on survey sampling at the upper undergraduate and graduate levels. It is also a valuable reference for practicing statisticians who would like to refresh their knowledge of sampling techniques.

Applied Statistics Using Stata
Mehmet Mehmetoglu, Tor Georg Jakobsen, 2016-11-26

Clear, intuitive and written with the social science student in mind, this book represents the ideal combination of statistical theory and practice. It focuses on questions that can be answered using statistics and addresses common themes and problems in a straightforward, easy to follow manner. The book carefully combines the conceptual aspects of statistics with detailed technical advice, providing both the why of statistics and the how. Built upon a variety of engaging examples from across the social sciences, it provides a rich collection of statistical methods and models. Students are encouraged to see the impact of theory whilst simultaneously learning how to manipulate software to meet their needs. The book also provides original case studies and data sets. Practical guidance on how to run and test models in Stata. Downloadable Stata programmes created to work alongside chapters. A wide range of detailed applications using Stata. Step by step notes on writing the relevant code. This excellent text will give anyone doing statistical research in the social sciences the theoretical, technical and applied knowledge needed to succeed.

Modern Clinical Trial Analysis
Wan Tang, Xin Tu, 2012-09-05

This volume covers classic as well as cutting edge topics on the analysis of clinical trial data in biomedical and psychosocial research and discusses each topic in an expository and user friendly fashion. The intent of the

book is to provide an overview of the primary statistical and data analytic issues associated with each of the selected topics followed by a discussion of approaches for tackling such issues and available software packages for carrying out analyses. While classic topics such as survival data analysis, analysis of diagnostic test data and assessment of measurement reliability are well known and covered in depth by available topic specific texts, this volume serves a different purpose: it provides a quick introduction to each topic for self learning, particularly for those who have not done any formal coursework on a given topic but must learn it due to its relevance to their multidisciplinary research. In addition, the chapters on these classic topics will reflect issues particularly relevant to modern clinical trials, such as longitudinal designs and new methods for analyzing data from such study designs. The coverage of these topics provides a quick introduction to these important statistical issues and methods for addressing them. As with the classic topics, this part of the volume on modern topics will enable researchers to grasp the statistical methods for addressing these emerging issues underlying modern clinical trials and to apply them to their research studies.

Community, Crime Control, and Collective Efficacy Craig D. Uchida, Marc L. Swatt, Shellie E. Solomon, Sean P. Varano, 2015-10-30. Collective efficacy is a neighborhood level concept in which community members create a sense of agency and assume ownership for the state of their local community. This concept is one of several forms of formal and informal social control that predict the overall functioning of a community. In this book, the authors examine collective efficacy and crime in eight Miami Dade County, Florida neighborhoods based on data they collected from across the country and in the Miami Dade neighborhoods themselves. They discuss findings relevant to the theory of collective efficacy, its ramifications for its use within communities, and make recommendations for future research and for translating these results into actionable crime prevention activities.

Social Risk Management Strategies and Health Risk Exposure Gerald Leppert, 2018-09. Risk exposure is a major cause of poverty, deprivation, and persistent vulnerability worldwide. This volume analyses individuals and households' responses to a variety of risks, with an emphasis on health risks. The study adapts the Social Risk Management (SRM) conceptual framework and extends it considerably for academic inquiry. Using household data from Ghana and Malawi, empirical evidence is provided on the complex relationship between high risk exposure and the application of proactive and reactive SRM strategies, including health insurance, showing their specific contributions to risk management.

Sprawl, Justice, and Citizenship Thad Williamson, 2010-05-12. Must the strip mall and the eight lane highway define 21st century American life? That is a central question posed by critics of suburban and exurban living in America. Yet despite the ubiquity of the critique, it never sticks. Americans, by the scores of millions, have willingly moved into sprawling developments over the past few decades. Americans find many of the more substantial criticisms of sprawl easy to ignore because they often come across as snobbish in tone. Yet as Thad Williamson explains, sprawl does create real, measurable social problems. Utilizing a landmark 30,000 person survey, he shows that sprawl fosters civic disengagement, accentuates inequality, and negatively impacts the environment. Yet while he highlights the deleterious effects of sprawl on

civic life in America he is also evenhanded He does not dismiss the pastoral homeownership ideal that is at the root of sprawl and is sympathetic to the vast numbers of Americans who very clearly prefer it Sprawl Justice and Citizenship is not only be the most comprehensive work in print on the subject it will be the first to offer an empirically rigorous critique of the most popular form of living in America today
