Commissioning Charles Nehme, In the complex ecosystem of a modern commercial building many systems work in harmony to create a productive and comfortable environment While the structural integrity and aesthetic design are visible the true heart of the building often remains unseen the intricate network of ducts dampers and fans that deliver the very air we breathe This invisible river of conditioned air is a critical determinant of occupant health comfort and a building's overall energy efficiency When this system is in perfect harmony its presence is felt only as a consistent pleasant atmosphere When it falls out of balance however the consequences are immediate and frustrating the sudden chill of a cold spot the stifling heat of a hot spot and the endless cycle of occupant complaints This book *The Delicate Art of Airflow Balancing* is born from the belief that mastering this invisible system is a craft worthy of deep study It is a comprehensive guide to the specialized skill of HVAC commissioning a process that goes far beyond simple maintenance It is about understanding the fundamental physics of airflow mastering the tools of the trade and applying a methodical almost artistic approach to bringing an entire building's HVAC system into perfect equilibrium Drawing on decades of hands on experience this book demystifies the complexities of air balancing providing a practical roadmap for technicians and engineers to achieve not just functional

systems but truly high performing comfortable and efficient ones It is an invitation to elevate your skills from a technician to a true master of the delicate art of airflow balancing

A Technical Comparison of Voluntary and Involuntary Sustainable Rating Systems for Building Development Roshan Moradali Mehdizadeh,2011 ABSTRACT There are five different publications that establish guidelines for sustainable building development that are examined in this report 1 Leadership in Energy and Environmental Design LEED 2 CalGreen 3 the International Green Construction Code IGCC 4 ASHRAE Standard 189 1 Standard 189 1 and 5 The San Francisco s Green Building Ordinance SFGBO Having

multiple publications can cause confusion among building developers architects engineers building consultants or various jurisdictions on what publication to follow use or reference in building development projects This thesis will provide various parties involved in building development a thorough understanding of each publication and the similarities or differences between them which will ultimately assist in identifying areas for all publications to improve Specifically this thesis demonstrates that the Material and Energy sections for all the publications must advance beyond the current requirements Also the comparison validates that CalGreen s Tier 2 is similar to LEED s local ordinances like the SFGBO This may mean two things 1 LEED will need to advance its gold or platinum certification requirements or potentially become less relevant or 2 local ordinances should reference or adopt CalGreen Tier 2 so that there is common language between local and state regulations This thesis identifies that LEED has the most stringent guidelines under the Building Site section out of all the publications Likewise the IGCC and Standard 189.1 have provisions under Water Use that push beyond other publications Additionally similar language between LEED and Standard 189.1 was found which was unsurprising as both publications are authored by the USGBC

Deep Energy Retrofit Alexander Zhivov, Rüdiger Lohse, 2020-07-13 This book provides detailed information on how to set up Deep Energy Retrofits DERs in public buildings and shares in depth insights into the current status of the major technologies strategies and best practice examples of how to cost effectively combine them Case studies from the U S A and Europe show that that Deep Energy Retrofit can be achieved with a limited core technologies bundle readily available on the market Characteristics of some of these core technology measures depend on the technologies available on an individual nation s market on the minimum requirements of national standards and on economics as determined by a life cycle cost analysis Also requirements to building envelope related technologies e g insulation levels windows vapor and water barriers and requirements for building

airtightness depend on specific climate conditions This Guide provides best practice examples of how to apply these technologies in different construction situations High levels of energy use reduction using core technology bundles along with improvements in indoor climate and thermal comfort can be only achieved when a Deep Energy Retrofit adopts a quality assurance process In addition to design construction commissioning and post occupancy phases of the quality assurance process the Guide emphasizes the importance of clearly and concisely formulating and documenting the Owner s goals expectations and requirements for the renovated building during development of the statement of work Another important component of the quality assurance process is a procurement phase during which bidders qualifications their understanding of the scope of work and its requirements and their previous experience are analyzed The building sector holds the potential for tremendous improvements in terms of energy efficiency and reducing carbon emissions and energy retrofits to the existing building stock represent a significant opportunity in the transition to a low carbon future Moreover investing in highly efficient building materials and systems can replace long term energy imports contribute to cost cutting and create a wealth of new jobs Yet while the technologies needed in order to improve energy efficiency are readily available significant progress has not yet been made and best practices for implementing building technologies and renewable energy sources are still relegated to small niche applications Offering essential information on Deep Energy Retrofits the book offers a valuable asset for architects public authorities project developers and engineers alike
