Background and Introduction to Gattaca

Gattaca is a 1997 American dystopian science fiction film written and directed by Andrew Niccol in his feature directorial debut. The film presents a future society driven by eugenics where children are conceived through genetic selection to ensure they possess the best hereditary traits of their parents. The film centers on Vincent Freeman, played by Hawke, who was conceived outside the eugenics program and struggles to overcome genetic discrimination to realize his dream of going into space.

The film draws on concerns over reproductive technologies that facilitate eugenics, and the possible consequences of such technological developments for society. It also explores the idea of destiny and the ways in which it can and does govern lives. Characters in Gattaca continually battle both with society and with themselves to find their place in the world and who they are destined to be according to their genes. The film is noted for its unique use of color. Cinematographer Shawnee Smith employed vibrant gold, green, and electric blue tones throughout the film, and shot the film in Super 16mm format, which adds an enlarged layer of grain.

The film was shot under the working title *The Eighth Day*, a reference to the seven days of creation in the Bible. However, by the time its release was scheduled for the fall of 1997, the Belgian film *Le huitième jour* had already been released in the US under the title *The Eighth Day*. As a result, the film was retitled *Gattaca*, which takes inspiration from the letters G, A, T, and C, derived from four of the nucleobases of DNA: guanine, adenine, thymine and cytosine. The film tanked at the box office and only earned a domestic total of \$32.3 million against a reported budget of \$36 million. It was a 1997 nominee for the Academy Award for Best Art Direction and the Golden Globe Award for Best Original Score. A follow-up series was in development at Showtime, but has been cancelled as of 2003. Gattaca currently holds an 82% fresh rating on Rotten Tomatoes with the following critics' consensus: "Intelligent and scientifically provocative, Gattaca is an absorbing sci-fi drama that poses important interesting ethical questions about the nature of science." Making Sense of Nature Noel Castree, 2013-08-15 We listen to a cacophony of voices instructing us how to think and feel about nature including our own bodies The news media wildlife documentaries science magazines and environmental NGOs are among those clamouring for our attention But are we empowered by all this knowledge or is our dependence on various communities allowing our thoughts sentiments and activities to be unduly governed by others *Making Sense of Nature* shows that what we call nature is made sense of for us in ways that make it central to social order social change and social dissent By utilising insights and extended examples from anthropology cultural studies human geography philosophy politics sociology science studies this interdisciplinary text asks whether we can better make sense of nature for ourselves and thus participate more meaningfully in momentous decisions about the future of life human and non human on the planet This book shows how nature can be made sense of without presuming its naturalness The challenge is not so much to rid ourselves of the idea of nature and its collateral concepts such as genes but instead we need to be more alert to how why and with what effects ideas about nature get fashioned and deployed in specific situations Among other things the book deals with science and scientists the mass media and journalists ecotourism literature and cinema environmentalists advertising and big business This innovative text contains numerous case studies and examples from daily life to put theory and subject matter into context as well as study tasks a glossary and suggested further reading The case studies cover a range of topics range from forestry in Canada and Guinea to bestiality in Washington State to how human genetics is reported in Western newspapers to participatory science experiments in the UK *Making Sense of Nature* will empower readers from a wide range of fields across the social sciences humanities and physical sciences

Control Adam Rutherford, 2022-11-15 How did an obscure academic idea pave the way to the Holocaust within just fifty years *Control* is a book about eugenics what geneticist Adam Rutherford calls a defining idea of the twentieth century Inspired by Darwin's ideas about evolution eugenics arose in Victorian England as a theory for improving the British population and quickly spread to America where it was embraced by presidents funded by Gilded Age monopolists and enshrined into racist American laws that became the ideological cornerstone of the Third Reich Despite this horrific legacy eugenics looms large today as the advances in genetics in the last thirty years from the sequencing of the human genome to modern gene editing techniques have brought the idea of population purification back into the mainstream Eugenics has a short history but a long past

Rutherford writes The first half of *Control* is the history of an idea from its roots in key philosophical texts of the classical world all the way into their genocidal enactment in the twentieth century The second part of the book explores how eugenics operates today as part of our language and culture as part of current political and racial discussions and as an eternal temptation to powerful people who wish to improve society through reproductive control With disarming wit and scientific precision Rutherford explains why eugenics still figures prominently in the twenty first century despite its genocidal past And he confronts insidious recurring questions did eugenics work in Nazi Germany And could it work today revealing the intellectual bankruptcy of the idea and the scientific impossibility of its realization **Books In Print 2004-2005** Ed
