Shared Governance for Sustainable Working Landscapes Timothy M. Gieseke,2016-08-05 Sustaining our agricultural landscapes is no longer just a technical scientific or even political problem but it has evolved into a socially complex so called wicked problem of conflicting social governance and economics This creates an extreme economic obstacle where the value of ecosystem services remains low and diffuse and the transactions costs remain high and multiple Using Uber like business platform technology and a shared governance model a symbiotic demand for environmental benefits is created Enabling multi sector transactions for environmental benefits this platform innovation would remedy the tragedy of the commons the economic nemesis to achieving landscape sustainability In a nutshell to sustain our agricultural landscapes a transdisciplinary approach supported by a shared governance model housed within a multi sided platform is needed This book introduces an assessment framework identifying governance actors styles and ratios for socio ecological systems The assessment uses a new governance compass to identify the types of actors completing which tasks and identifies the styles of governance used to complete the tasks It is aimed to anyone involved in sustainability science agricultural policy planning or integrated landscape design *Scientific and Technical Aerospace Reports* ,1988 **The Geometry of Genocide** Bradley Campbell,2015-10-29 In The Geometry of Genocide Bradley Campbell argues that genocide is best understood not as deviant behavior but as social control a response to perceived deviant behavior on the part of victims Using Donald Black s method of

pure sociology Campbell considers genocide in relation to three features of social life diversity inequality and intimacy According to this theory genocidal conflicts begin with changes in diversity and inequality such as when two previously separated ethnic groups come into contact or when a subordinate ethnic group attempts to rise in status Further conflicts are more likely to result in genocide when they occur in a context of social distance and inequality and when aggressors and victims cannot be easily separated Campbell applies his approach to five cases the killings of American Indians in 1850s California Muslims in 2002 India and 1992 Bosnia Tutsis in 1994 Rwanda and Jews in 1940s Europe These case studies which focus in detail on particular incidents within each instance of genocide demonstrate the theory s ability to explain an array of factors including why genocide occurs and who participates Campbell s theory uniquely connects the study of genocide to the larger study of conflict and social control By situating genocide among these broader phenomena The Geometry of Genocide provides a novel and compelling explanation of genocide while furthering our understanding of why humans have conflicts and why they respond to conflict as they do
