### Temperature Control

You should select a Wash/Rinse temperature based on the type of fabric and soils being washed. For best results, use the warmest wash water safe for fabric. Follow garment label instructions.

Your washer uses automatic temperature control to maintain a uniform water temperature by regulating incoming hot and cold water. This helps eliminate undissolved detergent and ensures consistent cleaning results. The cold wash is regulated at approximately 24°C by adding small amounts of hot water during the cold fill. The warm wash is maintained at approximately 38°C.

### Load Size or Water Level Control

Adjust water level to load size. Clothes should move freely. To change to a higher water level after agitation starts, you may turn knob to desired setting.

On models with a variable Load Size or Water Level control, you should turn the knob to RESET, then to desired setting.
