

Solving Equations

Many algebra problems are actually based on being comfortable in using equal algebraic equations. An equation is a statement that two expressions are equal. The unknowns in equations (the variables) will usually be represented by letters. The numbers in the equations are the constants. For example, $2x + 3 = 7$ is an equation. The numbers 2 and 3 are the constants. The letter x is the variable.

While there are many properties of real numbers and properties of equations, here are some of the most important that help us solve equations.

Basic Properties of Equations

Let a and b be any real numbers.

The properties allow us to simplify equations by performing the same action on both sides.

$$a + c = b + c \quad a - c = b - c$$

Multiplying like terms.

$$a \cdot c = b \cdot c \quad \frac{a}{c} = \frac{b}{c}$$

Equations based on the distributive property allow us to simplify an equation by adding, subtracting, multiplying, or dividing both sides equally.

$$a(b + c) = ab + ac \quad a(b - c) = ab - ac$$

Properties of Equations

Let a and b be any real numbers.

Additive property:

$$a + c = b + c$$

Subtractive property:

$$a - c = b - c$$

The properties allow us to simplify an equation by adding or subtracting the same number on both sides.

Multiplicative property:

$$a \cdot c = b \cdot c \quad \frac{a}{c} = \frac{b}{c}$$

The properties allow us to simplify an equation by multiplying both sides equally or dividing both sides equally. We can also simplify an equation by dividing both sides equally.

Multiplicative property:

$$a \cdot c = b \cdot c$$

Divisive property:

$$\frac{a}{c} = \frac{b}{c}$$

Math Education for America? Mark Wolfmeyer, 2013-12-04 Math Education for America analyzes math education policy through the social network of individuals and private and public organizations that influence it in the United States The effort to standardize a national mathematics curriculum for public schools in the U S culminated in 2010 when over 40 states adopted the Common Core State Standards for Mathematics Rather than looking at the text of specific policy documents this book complements existing critical reviews of the national math education curriculum by employing a unique social network analysis Breaking new ground in detailing and theorizing the politics of math education Wolfmeyer argues that the private interests of this network are closely tied to a web of interrelated developments human capital education policy debates over traditional and reform pedagogy the assumed content knowledge deficit of math teachers and the proliferation of profit driven educational businesses By establishing the interconnectedness of these interests with the national math education curriculum he shows how the purported goals of math education reform are aligned with the prevailing political agendas of this social network rather than the national interest

Mathematics Content for Elementary Teachers Douglas K. Brumbaugh, 2004-09-22 THE book for elementary education mathematics content courses Designed to help prospective teachers of elementary school mathematics learn content beyond the rote level this text stimulates readers to think beyond just getting the problem right and fosters their development into thoughtful reflective self motivated life long learners It stresses the what and why of elementary school mathematics content Hints are provided about how to teach the content but this is mostly left to courses and texts that are dedicated to that purpose The text is organized around the National Council for Teachers of Mathematics Principles and Standards for School Mathematics The Standards dictate the basic sections of the text Within each section appropriate specific topics are developed intertwined with technology problem solving

assessment equity issues planning teaching skills use of manipulatives sequencing and much more In addition major focal points of the Standards are emphasized throughout effective teachers of mathematics should be able to motivate all students to learn should understand the developmental levels of how children learn should concentrate on what children need to become active participants in the learning environment and should be engaged in ongoing investigations of new mathematical concepts and teaching strategies Mathematics Content for Elementary Teachers is based on several fundamental premises The focus of mathematics education should be on the process not the answer Elementary teachers should know the mathematics content they are teaching know more than the content they are teaching and teach from the overflow of knowledge It is important for teachers to be flexible in allowing students to use different procedures teaching from the overflow of knowledge implies knowing how to do a given operation more than one way and being willing to examine many different ways Teachers need to learn to carefully cover the topics to be taught to reflect upon them and to be able to organize them To help prospective elementary teachers concentrate on the mathematics content they will be expected to teach and begin to build the foundation for the methods they will use this text includes only elementary mathematics content and does not address middle school concepts Pedagogical features The text is organized according to NCTM Standards An informal writing style speaks directly to readers and is geared to pre service teachers Focus is given to multiple methods of problem solving at four developmental levels Questions exercises and activities are interspersed throughout each section rather than gathered at the end of each chapter Complete solutions for exercises are provided
