information from the receptors to the nucleus where transcription of key immune genes is activated Host cells have developed signal transduction systems to maintain homeostasis with pathogens Most cellular processes and cell signaling pathways are tightly regulated by protein phosphorylation in which protein kinases are key protagonists Pathogens have developed multiple mechanisms to subvert important signal transduction pathways such as the mitogen activated protein kinase MAPK and the nuclear factor kB NF kB pathways Pathogens also secrete effectors that manipulate actin cytoskeleton and its regulators hijack cell cycle machinery and alter vesicular trafficking This research topic focuses on the cellular signaling mechanisms that are essential for host immunity and their subversion by pathogens
