Harnessing Machine Learning to Decode Plant-Microbiome Dynamics for Sustainable Agriculture Eman Mohammad Khalaf, Mohsen Yoosefzadeh Najafabadi, Mohamed Mysara, Ahmed M. El-Baz, 2025-06-17 The field of plant

associated microbiomes has garnered significant attention due to its potential to address global food insecurity particularly in low and middle income countries As the global population continues to grow improving crop yield and productivity through advanced breeding programs has become imperative Plants and their associated microbial communities have co evolved over millennia forming intricate relationships that significantly impact plant health and fitness Recent studies have highlighted the benefits of these microbial communities such as enhanced growth improved nutrient uptake and increased tolerance to environmental stresses Despite these advancements traditional methods of analyzing multi omics data such as meta genomics meta transcriptomics and meta proteomics are often inadequate These methods struggle with false positives and fail to capture the interaction effects between variables leaving gaps in our understanding of how microbiomes influence plant phenotypes The advent of machine learning ML algorithms has revolutionized this field offering new ways to analyze complex microbiome data and predict their impact on plant traits
