Jr Thompkins, Massachusetts Institute of Technology. Gas Turbine and Plasma Dynamics Laboratory, 1981 A FORTRAN IV computer program has been developed for the calculation of the inviscid transonic supersonic flow field in a fully three dimensional blade passage of an axial compressor rotor or stator Rotors may have dampers part span shrouds MacCormack's explicit time marching method is used to solve the unsteady Euler equations on a finite difference mesh This technique captures shocks and smears them over several grid points Input quantities are blade row geometry operating conditions and thermodynamic quantities Output quantities are three velocity components density and internal energy at each mesh point Other flow quantities are calculated from these variables A short graphics package is included with the code and may be used to display the finite difference grid blade geometry and static pressure contour plots on blade to blade calculation surfaces or blade suction and pressure surfaces Flows in four transonic compressor rotors have been analyzed and compared with exit flow field measurements and intra blade static density measurements obtained with a gas fluorescence technique These comparisons have generally shown that the computed flow fields accurately model the experimentally determined passage shock positions and overall aerodynamic performance The computer code was developed and generally run on a large minicomputer system a Digital Equipment Corporation PDP 11 70 with run times of two to three days The code has also been run on several main frame computers IBM 3033 IBM 360 678 UNIVAC 1110 CDC 7600 and a CRAY 1 Typical run times on an IBM 3033 have been found to be 5 10 hours Pervasive Computing Paradigms for Mental Health Silvia Serino, Aleksandar Matic, Dimitris Giakoumis, Guillaume Lopez, Pietro Cipresso, 2016-04-08 This book constitutes the refereed proceedings of the 5th International Conference on Pervasive Computing Paradigms for Mental Health MindCare 2015 held in Milan Italy in September 2015 The 23 full papers and 6 short papers presented were carefully reviewed and selected from 40 submissions The papers deal with the use of technologies in favor of maintaining and improving mental wellbeing They focus on building new computing paradigms and on addressing a multitude of challenges in mental healthcare for example in psychiatric and psychological domains with emphasis on new technologies such as video and audio technologies and mobile and wearable computing *Context-Aware Systems and Applications* Phan Cong Vinh, Nguyen Manh Hung, Nguyen Thanh Tung, Jun Suzuki, 2013-02-02 This book constitutes the thoroughly refereed proceedings of the first International Conference on Context Aware Systems and Applications ICCASA 2012 held in Ho Chi Minh City Vietnam in November 2012 The 34 revised full papers presented were carefully selected and reviewed from over 100 submissions The papers cover a wide spectrum of issues in the area of Context Aware Systems CAS CAS are going to shape networked computing systems of the
