Behavioural Models Matthias Kunze, Mathias Weske, 2016-09-10 This textbook introduces the basis for modelling and analysing discrete dynamic systems such as computer programmes soft and hardware systems and business processes The underlying concepts are introduced and concrete modelling techniques are described such as finite automata state machines and Petri nets The concepts are related to concrete application scenarios among which business processes play a prominent role The book consists of three parts the first of which addresses the foundations of behavioural modelling After a general introduction to modelling it introduces transition systems as a basic formalism for representing the behaviour of discrete dynamic systems This section also discusses causality a fundamental concept for modelling and reasoning about behaviour In

turn Part II forms the heart of the book and is devoted to models of behaviour. It details both sequential and concurrent systems and introduces finite automata, state machines and several different types of Petri nets. One chapter is especially devoted to business process models, workflow patterns and BPMN, the industry standard for modelling business processes. Lastly, Part III investigates how the behaviour of systems can be analysed. To this end, it introduces readers to the concept of state spaces. Further chapters cover the comparison of behaviour and the formal analysis and verification of behavioural models. The book was written for students of computer science and software engineering as well as for programmers and system analysts interested in the behaviour of the systems they work on. It takes readers on a journey from the fundamentals of behavioural modelling to advanced techniques for modelling and analysing sequential and concurrent systems and thus provides them a deep understanding of the concepts and techniques introduced and how they can be applied to concrete application scenarios.

Innovations in 3D Geo-Information Sciences Umit Isikdag, 2014-06-07 3D GeoInfo aims to bring together international state of the art research and facilitate the dialogue on emerging topics in the field of 3D geo information. The conference offers an interdisciplinary forum in the fields of 3D data collection and modeling, reconstruction and methods for 3D representation, data management for maintenance of 3D geo information or 3D data analysis and visualization. The book covers the best papers from 3D GeoInfo held in Istanbul in November 2013.

Making Sense of Field Research Sheila Pontis, 2018-07-17 Learn how to use field research to bring essential people centred insights to your information design projects. Information design is recognized as the practice of making complex data and information understandable for a particular audience but what is often overlooked is the importance of understanding the audience themselves during the information design process. Rather than rely on intuition or assumptions, information designers need evidence gathered from real people about how they think, feel and behave in order to inform the design of effective solutions. To do this, they need field research. If you're unsure about field research and how it might fit into a project, this book is for you. This text presents practical, easy to follow instructions for planning, designing and conducting a field study as well as guidance for making sense of field data and translating findings into action. The selection of established methods and techniques drawn from social sciences, anthropology and participatory design is geared specifically toward information design problems. Over 80 illustrations and five real world case studies bring key principles and methods of field research to life. Whether you are designing a family of icons or a large scale signage system, an instruction manual or an interactive data visualization, this book will guide you through the necessary steps to ensure you are meeting people's needs.
