20th century consumer credit in the United States was perceived as unfair and exploitative. Social reformers fought to limit the economic and social impact of small lenders they decried as loan sharks. Reputable businesses steered clear of sales credit because of the questionable consumers that it would attract. By the 1970s however credit in America had been reimagined as a legitimate tool of household finance that was understood to have broad social and economic benefits. This transformation in the moral economy of credit accompanied a revolution in lending technologies and the regulatory treatment of consumer credit. Ultimately these changes allowed American households to amass unprecedented debt that eventually precipitated the worst financial crisis of postwar America. To understand the origins of that crisis we need to understand not just the shifting habits of consumers but also what happened to lenders as the public moved from opposing credit to embracing it. This book traces how that transformation occurred. Nearly all accounts of the origins of American consumer credit have focused exclusively on the U S experience. Single country case studies have their virtues. But they do not allow the observer easily to differentiate what is unusual about the U S case from what is common even to countries with very different credit practices.

**Fundamentals of Financial Management, Second Edition** BOSE, D. CHANDRA, 2011-04-30 This new edition expanded with the addition of four new chapters continues to help students develop an essential understanding of how financial management plays a positive role in strategic management of organisations. The book is designed for a foundation course in financial management for postgraduate students of business management MBA commerce engineering and technology. It focuses on the basic concepts underlying the theory of financial management and also real world practice in areas of investment financing and asset management. Each financial function is discussed in a lucid and concise manner to help students improve their basic skills in financial management. The aim of the book is to enable the readers to gain insight into the financial decision making processes. The book introduces the readers to the three major decision making areas in financial management: break even analysis, decisions involving alternative choices and variance analysis.

**Key Features:** A systematic presentation of the subject matter supported with a number of illustrations and diagrams. The topics of ratio analysis and cash flow analysis have been thoroughly revised and enlarged in accordance with the Accounting Standards AS issued by the ICAI. Theoretical discussions are supplemented with suitable case studies. Examination problems are given at the end of each chapter. The chapter New Horizons in Budgeting explains the latest trends in budgeting.
