Pathways to Institutional Improvement with Information Technology in Educational Management C.J. Patrick Nolan, A. Fung, Margaret Brown, 2006-04-11 New Zealand schools have experienced unprecedented change during the last decade Radical restructuring of the frameworks for both curriculum and qualifications followed a movement towards self management in 1989 The curriculum framework consisting of seven essential learning areas has been progressively introduced with completion not expected until 2002 The new Qualifications Framework based on unit standards was launched in 1994 The introduction of unit standards signalled an emphatic movement towards the use of internal assessment for awarding qualifications at the senior secondary school level

Each course had unit standards defined which described the outcomes and the performance criteria that would be used to determine whether or not the standard had been achieved Approximately five to eight standards would be used for each full year course and each standard had a number of credits associated with it The plan which has since been modified was for these credits to contribute to a National Certificate of Educational Achievement at years 12 and 13 and other subject specific National Certificates Secondary schools were faced with the task of recording and reporting 1 unit standard results to the New Zealand Qualifications Authority This by itself was not a major issue as the significant suppliers of CSIS had modules available which satisfied this need At this time a model was being presented to school audiences demonstrating how the recording reporting and evaluation of assessment data relating to the curriculum framework could be relatively straight forward IF there was a common assessment currency across the school This model was converted into software form for demonstration purposes
