

Essay on Trauma: PTSD, Developmental Disorder & Complex Trauma Essay

Introduction

Trauma is an emotional or psychological response which is related to an experience which is disturbing or distressing. Trauma occurs to an individual who has been exposed to events such as accidents, war, and various illnesses. Trauma consists of post-traumatic stress disorders (PTSD), developmental disorder, and complex trauma. The PTSD occurs whenever an individual has been exposed to a terrifying ordeal which led to physical harm. The individuals suffering from this disorder tend to have many frightening memories and thoughts which instills fear in their lives. Also, this condition is associated with flashbacks, feelings of hopelessness, unpredictable emotions, and constant feelings of despair and sadness. The situation is experienced mostly among the Armed forces since they get involved in frightening events throughout their lives. Due to the high cases of the militants who have this disorder, this paper will outline how the American armed forces perceive PTSD and trauma.

Causes of Trauma among the Veterans

The PTSD is also referred to as the combat stress or the shell shock which arises after a life-threatening event. It is usual for the body and mind to experience shock after a threatening event, but whenever the nervous system becomes stuck, it leads to PTSD among the veterans. The nervous system experiences immobilization whenever one encounters much stress, which is caused by a specific event, and even when the danger has passed away, the person finds themselves stuck. The veteran cannot move away from an event and return to their normal state, thus leading to PTSD. The second way of responding to a stressful condition is through fight or flight, which happens whenever a veteran requires to defend or to survive from the dangerous combat situation. This action makes the muscles to tighten, increases the heart-beat and the blood pressure, thus making the person react (Hoge, Goldberg & Castro, 2009). After the hazardous event has passed, the nervous system prepares the body to remain calm, lowering the blood pressure and the heart rate hence making the body to go back to its normal condition.

Symptoms of the PTSD among the Veterans

The intrusive and recurrent reminders about the traumatic situation make the veteran to have nightmares and distressing thoughts, which cause them to feel like the event is repeating itself. The individual tends to experience physical and emotional reactions such as heart palpitations, panic, and uncontrollable shaking. Due to these occurrences, the person lives in fear, thus having negative alterations in their moods and thoughts. In most times, the veteran might live in guilt, which affects them when carrying out their daily activities (Elliott, Gonzalez & Larsen, 2011). Therefore, the dangerous event makes the individual not to have the positive emotions in their lives hence leading to PTSD.

The veterans might exceptionally avoid people and thing which contributed to the occurrence of these events. Among the militants, they tend to quit their job due to fear of occurrence of another
