Large-scale dam removal and ecosystem restoration Rebecca McCaffery, Laura Soissons, Jeffrey J. Duda, Jean-Marc Roussel, 2024-09-20 Rivers are vital ecosystems that support aquatic and terrestrial biodiversity and several ecosystem services including food water culture and recreation After centuries of building dams on rivers across the world dam removal projects are now on the rise due to obsolescence reservoir sedimentation insufficient return on investment or river restoration and conservation priorities Most dam removal projects have focused on smaller structures 10 m in structural height but larger structures have also started to be removed in increasing numbers as practitioners river managers conservationists and the public have gained more experience with the practice Recent estimates suggest that only a small fraction of dam removals have been scientifically studied and include mostly small dams and short time scales Documenting the long term ecological outcomes of large dam removal i e 10 m tall represents a new frontier in dam removal research projects are more recent and provide an opportunity to understand the complex ecological changes that occur with these transformative restoration projects Here we aim to collate a diverse array of papers on long term dam removal research projects involving larger dams 10 m to synthesize the issues outcomes tools and experimental designs used to study large dam removal projects from physical biological and ecological perspectives With this collection we aim to showcase diverse global projects on ecosystem responses to large dam removal collect perspectives from different disciplines fields and geographies and synthesize the current state of knowledge in this area We expect that this Research Topic will be informative to ongoing long term ecological restoration and monitoring projects related to dam removal as well as to upcoming large dam removal projects We welcome contributions from all disciplines addressing the physical ecological and ecosystem responses to large scale dam removal Contributions could include original research in a specific discipline or area case studies or synthesis papers that address one or more of these topics in a transdisciplinary approach Contributors could address any of the following major topics as related to outcomes of large dam removal alone or in combination Freshwater estuarine and marine aquatic biota River and reservoir geomorphology Terrestrial and riparian vegetation Wildlife Sedimentation and Modelling We would like contributors to highlight key results in their area of study cross disciplinary insights and lessons learned that could inform ongoing monitoring and research efforts in current projects as well as upcoming large dam removals

Fractivism Sara Ann Wylie, 2018-01-25 From flammable tap water and sick livestock to the recent onset of hundreds of earthquakes in Oklahoma the impact of fracking in the United States is far reaching and deeply felt In Fractivism Sara Ann Wylie traces the history of fracking and the ways scientists and everyday people are coming together to hold accountable an industry that has managed to evade regulation Beginning her story in Colorado Wylie shows how nonprofits landowners and community organizers are creating novel digital platforms and databases to track

unconventional oil and gas well development and document fracking's environmental and human health impacts. These platforms model alternative approaches for academic and grassroots engagement with the government and the fossil fuel industry. A call to action, Fractivism outlines a way forward for not just the fifteen million Americans who live within a mile of an unconventional oil or gas well but for the planet as a whole.

Environmental Law Across Cultures Kirk W.

Junker, 2019-12-09 This book provides a practical functional comparison among various institutions, tools, implementation practices, and norms in environmental law across legal cultures. This is a new approach that focuses on the act of comparison, looking at legal practice from the ground up, including the perspective of citizens. Most literature on comparative environmental law either focuses on a two-way comparison of state jurisdictions or simply juxtaposes environmental features of two or more state jurisdictions without engaging in any analysis of the comparison. However, this book treats legal cultures as the objects of comparison as it provides practical comparisons among various institutions, tools, and norms in environmental law. The arrangement and organisation of the material reverses the more traditional presentation of comparative environmental law as a series of countries within which separate descriptions are respectively presented. In this book, the reader is presented with environmental legal themes with examples and case studies drawn from various cultures that are compared in order to help understand the theme. Case studies draw on the authors' experiences in a range of legal cultures including Australia, Brazil, China, Chile, Ethiopia, Germany, India, Nigeria, Slovakia, and the USA. The comparative nature of the book allows domestic professionals to develop skills to enable them to understand and advocate broader contexts for clients and helps students become more aware of specific legal systems while questioning why their own system functions or does not function as it does. The book is aimed at advanced undergraduate and postgraduate students of environmental law as well as researchers and practitioners.

Democratic Management of an Ecosystem Under Threat

Kelly Dunning, 2023-07-11 Using case studies from Florida and the Caribbean region, this book summarizes the state of coral reef conservation today. The question this book answers is what is the best way to protect the vulnerable coral reefs with an ever-worsening climate crisis. The book's contribution is looking closely at people's avenues to participate in coral reef management and how the public is increasingly making their voices heard in the management process.
