Ternary Phase Diagram Experiment:

Methods for Phase Diagram Determination Ji-Cheng Zhao, 2011-05-05 Phase diagrams are maps materials scientists often use to design new materials They define what compounds and solutions are formed and their respective compositions and amounts when several elements are mixed together under a certain temperature and pressure This monograph is the most comprehensive reference book on experimental methods for phase diagram determination It covers a wide range of methods that have been used to determine phase diagrams of metals ceramics slags and hydrides Extensive discussion on methodologies of experimental measurements and data assessments Written by experts around the world covering both traditional and combinatorial methodologies A must read for experimental measurements of phase diagrams **The Boundary Theory of Phase Diagrams and Its Application** Muyu Zhao, Lizhu Song, Xiaobao Fan, 2011-05-30 The Boundary Theory of Phase Diagrams and Its Application Rules for Phase Diagram Construction with Phase Regions and Their Boundaries presents a novel theory of phase diagrams Thoroughly revised on the basis of the Chinese edition and rigorously reviewed this book inspects the general feature and structure of phase diagrams and reveals that there exist actually two categories of boundaries This innovative boundary theory has solved many difficulties in understanding phase diagrams and also finds its application in constructing multi component phase diagrams or in calculating high pressure phase diagrams Researchers and engineers as well as graduate students in the areas of chemistry metallurgy and materials science will benefit from this book Prof Muyu Zhao was the recipient of the 1998 Prize for Progress in Science and Technology for his work on the boundary theory of phase diagrams awarded by the National Commission of Education China and many other prizes **The Experimental Determination of Solubilities** G. T. Hefter, R. P. T. Tomkins, 2003-11-14 Guidelines are provided on the reliability of various methods as well as information for selecting the appropriate technique Unique coverage of the whole range of solubility measurements Very useful for investigators interested in embarking upon solubility measurements Experimental Study of Factors Controlling the Effectiveness of High-temperature Protective Coatings for Tungsten Jack Brett, 1965 The restrictions imposed by the processes of diffusion evaporation and coating substrate reactions on the choice of potential protective coating materials for tungsten were studied analytically and experimentally The diffusive restriction is the most limiting and eliminates many refractory oxides with otherwise satisfactory attributes The diffusive properties of rare earth sesquioxides and complex refractory oxides were explored by means of oxidation experiments and a layer growth experiment respectively Mass spectrometric studies of the vaporization of refractory complex oxides were carried out to determine the applicability of the Wagner Hauffe method of predicting vaporization rates Provided certain thermodynamic approximations are valid and the vapor species over the complex oxide are the same as those over the pure component oxides the predictions yield order of magnitude accuracy A survey and exploration of reactions of possible coating materials with tungsten was performed emphasizing promising materials from the diffusion studies Author *Experimental*
