The Green House New Directions In Sustainable:

The Green House Alanna Stang, Christopher Hawthorne, 2005-06-02 From the arid deserts of Tucson Arizona to the icy forests of Poori Finland to the tropical beaches of New South Wales Australia to the urban jungle of downtown Manhattan critics Alanna Stang and Christopher Hawthorne have travelled to the farthest reaches of the globe to find all that is new in the design of sustainable or green homes The result is more than thirty five residences in fifteen countries and nearly every conceivable natural environment designed by a combination of star architects and heretofore unknown practitioners including Santiago Calatrava Shigeru Ban Miller Hull Rick Joy Lake Flato Kengo Kuma Glenn Murcutt Pugh Scarpa Werner Sobek and many others Projects are presented with large colour images plans drawings and an accompanying text that describes their green features and explains how they work with and in the environment The Green House is not only a beautiful object in its own right but is sure to be an indispensable reference for anyone building or interested in sustainable design The Green House, 2009 Green Houses Josep Maria Minguet, 2013 An ecological house also known as the sustainable house refers to a structure and process which are environmentally responsible That is an efficient resource management is incorporated throughout the life cycle of the building including design building use and maintenance New Directions in Sustainable Design Adrian Parr, Michael Zaretsky, 2010-10-09 Recently there has been a plethora of work published on the topic of sustainability much of which is purely theoretical or technical in its approach More often than not these books fail to introduce readers to the larger challenge of what thinking sustainably might entail Combining a series of well know authors in contemporary philosophy with established practitioners of sustainable design this book develops a coherent theoretical framework for how theories of sustainability might engage with the growing practice of design This book brings together new and emerging perspectives on sustainability provides cohesive and jargon free reading articulates the specificity of both theory and practice to develop a symbiotic relationship which allows the reader to understand what thinking sustainably entails This volume describes a variety of new ways to approach sustainable design and it equips the next generation of designers with necessary conceptual tools for thinking sustainably **The Greening of America's Building Codes** Aleksandra Jaeschke, 2022-12-20 Environmental disasters and severe weather due to climate change both triggered by human actions have had an increasingly direct impact on our homes But the way in which America builds its homes is part of the problem This deeply researched history of sustainable design standards in building codes explores how public policy standard setting trade associations and financial incentives influence the ways in which the construction of our homes impacts the environment The Greening of America's Building Codes investigates the regulations and economic incentives meant to control the environmental impact of contemporary construction practices as it analyzes the history of residential building codes The book exposes how the socioeconomic and political forces that influenced early building code development continue to define the character of current building codes and by extension determine how we regulate

environmental impact and define sustainability today More relevant than ever The Greening of America s Building Codes is a valuable tool for architects architecture students builders real estate developers and homeowners who want to understand how public policy and their own day to day decisions impact the environment **The Architecture of Home in Cairo**

Mohamed Gamal Abdelmonem,2016-03-03 The hawari of Cairo narrow non straight alleyways are the basic urban units that have formed the medieval city since its foundation back in 969 AD Until early in the C20th they made up the primary urban divisions of the city and were residential in nature Contemporary hawari by contrast are increasingly dominated by commercial and industrial activity This medieval urban maze of extremely short broken zigzag streets and dead ends are defensible territories powerful institutions and important social systems While the hawari have been studied as an exemplar for urban structure of medieval Islamic urbanism and as individual building typologies this book is the first to examine in detail the socio spatial practice of the architecture of home in the city It investigates how people live communicate and relate to each other within their houses or shared spaces of the alleys and in doing so to uncover several new socio spatial dimensions and meanings in this architectural form In an attempt to re establish the link between architecture past and present and to understand the changing social needs of communities this book uncovers the notion of home as central to understand architecture in such a city with long history as Cairo It firstly describes the historical development of the domestic spaces indoor and outdoor and provides an inclusive analysis of spaces of everyday activities in the hawari of old Cairo It then broadens its analysis to other parts of the city highlighting different customs and representations of home in the city at large Cairo in the context of this book is represented as the most sophisticated urban centre in the Middle East with different and sometimes contrasting approaches to the architecture of home as a practice and spatial system In order to analyse the complexity and interconnectedness of the components and elements of the hawari as a collective home it layers its narratives of architectural and social developments as a domestic environment over the past two hundred years and in doing so explores the in depth social meaning and performance of spaces both private and public *The Building*

Sustainability and Privilege Gabriel Arboleda, 2022-05-13 Social design the practice of designing for poverty relief is one of the most popular fields in contemporary architecture Its advocates focusing on the architect's creativity and good intentions are overwhelmingly laudatory while its detractors concerned with the experience of its beneficiaries have dismissed it as an expression of cultural imperialism Placed midway between innocuous celebration and radical critique Sustainability and Privilege highlights the lessons that can be learned from social design's current limitations and proposes a feasible way to improve this practice In this broad ranging account enlivened by fieldwork and case studies Gabriel Arboleda contends that social design's invocation of sustainability often serves to marginalize and displace vulnerable populations through projects that involve experimentation of faulty alternative technologies or that result in so called green gentrification or that impose untoward economic and other burdens Arboleda is fiercely critical of the way social design has been carried out in impoverished regions of the world most notably in Africa and Latin America In addressing the challenges posed by issues of privilege in social design's use of sustainability the book proposes a new interdisciplinary approach called ethnoarchitecture arguing for a simpler open ended and stakeholder driven process that eliminates the casual imposition of the architect's ideas on vulnerable populations foregrounding the people's voices experience and input in social design practice
