The Homing Instinct Meaning And Mystery In Animal Migration:

The Homing Instinct Bernd Heinrich, 2015-05-25 Acclaimed scientist and author Bernd Heinrich has returned every year since boyhood to a beloved patch of western Maine woods. What is the biology in humans of this deep pull toward a particular place and how is it related to animal homing? Heinrich explores the fascinating science chipping away at the mysteries of animal migration: how geese imprint true visual landscape memory, how scent trails are used by many creatures from fish to insects to amphibians to pinpoint their home if they are displaced from it, and how the tiniest of songbirds are equipped for solar and magnetic orienteering over vast distances. Most movingly, Heinrich chronicles the spring return of a pair of sandhill cranes to their home pond in the Alaska tundra. With his trademark marvelous mind-altering prose, *The Homing Instinct* (Los Angeles Times) he portrays the unmistakable signs of deep psychological emotion in the newly arrived birds and reminds us that to discount our own emotions toward home is to ignore biology itself.

The Invisible Hand of Cancer Carola Schmidt, 2024-01-05 Oncology is a field characterized as medicine of high complexity, and cancer is generally regarded as a complex system. Therefore, it cannot be classified and treated according only to its biology. Even though research on the biology of cancer has increased and more studies have been published, the related sociological, political, and economic dimensions, as well as mathematical models that predict whether this condition will take one course or another, have often been neglected. *The Invisible Hand of Cancer: The Complex Force of Socioeconomic Factors in Oncology* Today unfolds the variables behind the biological disease, exploring the social aspects and presenting cancer as a model inside of the Complexity Theory. Cancer is a generic word for more than 200 diseases. In a wider view of cancer treatment, the various factors of cancer interact in multiple ways, and it is a difficult task to identify and understand all the possible combinations in this system. All these variables and how they interact can be defined as the invisible hand of cancer. This book does not intend to be an exhaustive analysis of these aspects. It is a door being opened to the cancer research journey along the years and beyond its biology. It will also discuss how social behavior can interfere in the evolution of cancer treatment as a result of society's way of thinking and choices, thus the importance of truly

addressing cancer as an intricate system and a public health issue After the success of my children s books about cancer Chubby s Tale The true story of a teddy bear who beat cancer Bald is Beautiful A letter for a fabulous girl Cancer Daily Life and What is Cancer A book for kids I have developed a passion for writing about science in a simple way for non scientist readers I have also worked to build a career as a writer communicating with patients advocates and oncology and pediatric oncology professionals mostly on Twitter Everyone knows someone who has or had cancer so more and more popular science books on this topic are becoming bestsellers This book is directed to a general audience and follows scientific standards encompassing high quality data but in an easy to read format Furthermore it will raise awareness and show how simple actions such as not judging patients and not spreading false popular beliefs can contribute to achieve a new milestone in the cancer journey
