 This invaluable manual is intended to guide and facilitate human anatomical dissections It is flexible enough for use in long
 as well as short courses and is thus structured in such a way that the dissection of the body can be completed in 110 to 160
 hours Although some medical schools have reduced the amount of dissection the North American schools have lengthened
 their courses The manual can also be used in those courses where only part of the body is dissected and even in the study of
 prosected material It can be particularly useful as a link with real anatomy when used together with computerised anatomy
 programs many curricula emphasise that the student should go back and forth between the body and computer programs
 The guide is also useful where students do not dissect but merely look at atlases prosections and models by providing a link
 to real living and variable anatomy Nowadays many anatomy courses are aimed solely at systems anatomy Although
 important as systems are regions are clinically vital since many more problems concern damage to several systems because
 the lesions are regional This is where the guide is of considerable help There is an introduction for each anatomical region
 and for each section to be dissected there is an overview a dissection schedule which guides the student through a set of
 instructions a summary and a list of objectives that are clinically important The terminology used is the latest This manual is
 suitable for medical dental osteopathy and chiropody schools as well as human biology and science programs that include
 dissection in their undergraduate gross anatomy course It is also of value for advanced knowledge of anatomy for surgery as
 required by further qualifications and in relation to specialised training involving interpretation of normal anatomy in non
 invasive imaging of anatomy for clinical diagnosis practice of clinical surgical skills on cadaveric material and in discussions
 about clinical problems **Demonstrations of Anatomy ; Being a Guide to the Dissection of the Human Body** George
