en mathématiques la cohomologie galoisienne est l étude de l action d un groupe de galois sur certains groupes par des méthodes cohomologiques elle permet d obtenir des résultats à la fois sur le groupe de galois agissant et sur le groupe sur lequel il agit en particulier le groupe de galois d une extension de corps de nombres L/K agit naturellement par exemple sur le groupe multiplicatif L^\times mais aussi sur le groupe des unités de l anneau des entiers du corps L ou sur son

in mathematics galois cohomology is the study of the group cohomology of galois modules that is the application of homological algebra to modules for galois groups a galois group G associated to a field extension L/K acts in a natural way on some abelian groups for example those constructed directly from L but also through other galois representations that may be
