System description

The Soxtec™ 2050 System represents the new generation of automated Soxhlet extraction. It is designed for maximum user convenience with full automation for unattended operation and minimum system handling.

This has been achieved by applying a new patented version of the Soxhlet extraction technique

combined with integral solvent handling. The system consists of an Extraction Unit, a Control Unit and a Drive Unit. The sample to be analysed is weighed into thimbles and inserted into the extraction unit. Solvent is added to the extraction cups in a closed system. The cups are heated by the electric heating plate. The 4-step extraction consists of boiling, rinsing, solvent recovery and pre-drying.

The system is flexible and suitable for a broad range of applications in the food, feed, environmental and industrial segments. It is designed to work with all common solvents used for solvent extraction (we do not recommend the use of Diethyl ether due to the explosion risk when handling it). Typical solvent recovery is 80%, only 16 ml solvent is used per sample. Sample preparation prior to GC/HPLC work is also suitable; ask for our special accessories. The repeatability is equal to traditional technique.
