

Chapter 1 Introduction to Earth Science

Summary

1.1 What Is Earth Science?

☞ Earth science is the name for the group of sciences that deals with Earth and its neighbors in space.

- Geology means “study of Earth.” Geology is divided into physical geology and historical geology.
- Oceanography is the study of the Earth’s oceans, as well as coastal processes, seafloor topography, and marine life.
- Meteorology is the study of atmosphere and the processes that produce weather and climate.
- Astronomy is the study of the universe.

☞ The nebular hypothesis suggests that the bodies of our solar system evolved from an enormous rotating cloud called the solar nebula. It was made up mostly of hydrogen and helium, with a small percentage of heavier elements.

- Shortly after the Earth formed, melting occurred in the Earth’s interior. Gravity caused denser elements to sink to Earth’s center. Less dense elements floated toward the surface. As a result, Earth is made up of layers of materials that have different properties.

1.2 A View of Earth

☞ Earth can be thought of as consisting of four major spheres: the hydrosphere, atmosphere, geosphere, and biosphere.

- The hydrosphere is the water portion of Earth.
- The atmosphere is an envelope of gases that surrounds Earth.
- The geosphere is the layer of Earth under both the atmosphere and the oceans. It includes the core, the mantle, and the crust.
- The biosphere is made up of all life on Earth.

☞ Because the geosphere is not uniform, it is divided into three main parts based on differences in composition—the core, the mantle, and the crust.

- The core, Earth’s innermost layer, is located just below the mantle.
- The mantle is 2890 kilometers thick. It is located below the Earth’s crust and above the Earth’s core.
- The crust is the thin, rocky, outer layer of Earth.

☞ The theory of plate tectonics provided geologists with a model to explain how earthquakes and volcanic eruptions occur and how continents move.

- Destructive forces wear away Earth’s surface.
- Constructive forces build up the Earth’s surface.
- Tectonic plates move constantly over the Earth’s mantle.

Rhodes,2012-06-10 It s impossible to grasp the whole planet or integrate all the descriptions of it But because we live here we have to try This is not just an artistic compulsion or an existential yearning still less an academic exercise It s a survival issue This is the only planet we have We re stuck here and we don t own the place it would be the height of arrogance to assume that we do We re tenants here not owners but we re tenants with hope for a long term tenancy We want to extend our lease just as far as we can from Earth A Tenant s Manual In Earth A Tenant s Manual the distinguished geologist Frank H T Rhodes President Emeritus of Cornell University provides a sweeping accessible and deeply informed guide to the home we all share showing us how we might best preserve the Earth s livability for ourselves and future generations Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life He emphasizes the changes that are of concern to us today from earthquakes to climate change and the clashes over the energy resources needed for the Earth s exploding population He concludes with an extended exploration of humanity s prospects on a complex protean and ultimately finite world It is not a question of whether the planet is sustainable the challenge facing life on Earth and the life of the Earth is whether an expanding and high consumption species like ours is sustainable Only new resources new priorities new policies and most of all new knowledge can reverse the damage that humanity is doing to our home and ourselves A sustainable human future Rhodes concludes in this eloquent sobering but ultimately optimistic book will require a sense of responsible stewardship for we are not owners of this planet we are tenants Surveying the systems large and small that govern Earth s processes and influence its changes Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs or at least limit further damage to our home **Foundations of Earth Science Study Guide** Edward J.
